ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT
FOR THE PROPOSED DAM CONSTRUCTION BY AFRICALLA
ON PLOT L.R. NO. 3777/218, GILGIL, NAKURU COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Africalla Kenya Limited is proposing to construct a 17,000m³ lagoon to harvest rain water from green houses and surface water runoff and store to ensure water supply reliability at all hydrologic events for enhanced irrigated agricultural production, Nakuru County.

The following are the anticipated impacts and proposed mitigation measure:

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Health and safety of workers	<ul style="list-style-type: none"> Workers should be provided with full personal protective equipment (PPE) for their health and safety. The site should be signed and controlled by trained flagmen/flag women and lit by night. Well stocked first aid boxes should be availed in case of any incidents or accidents and a general register should be available to record such occurrences.
Generation of waste	<ul style="list-style-type: none"> Construction waste shall be minimized and recycled or reused as much as possible to ensure that materials that would otherwise be disposed of as waste are diverted for productive uses. Ensure proper disposal of spoil if any.
Noise pollution	<ul style="list-style-type: none"> Noise emissions should be minimized as much as possible from the source point while workers should be provided with appropriate personal protective equipment especially if the levels exceed 85dB for a continuous eight hours exposure. Ensure that machines are switched off when not in use.
Storm water	<ul style="list-style-type: none"> Drainage channels should be dug on the area lying on the upper side of the dam to ensure storm water does not enter the excavated area in case of rain.

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Dust emissions	<ul style="list-style-type: none"> Workers need to be in their respective PPEs during working hours. Provide scour checks on over-15% slopes or when working in loose soils and where necessary sprinkle water. Avoid excavation works during extremely dry weather if possible.
Enhanced erosion/ changes in topography due excavation	<ul style="list-style-type: none"> Have soil erosion prevention mechanisms in place, such as compaction of soil on the base of the reservoir and its embankment to reduce chances of erosion.
Breeding site for mosquitoes	<ul style="list-style-type: none"> Monitor and control the possible creation of mosquito breeding site.
Risk of drowning	<ul style="list-style-type: none"> Fencing off the dam to ensure it is only accessible to the required personnel. Put warning signs (written in English and Kiswahili languages) at strategic sites.
Overflowing of the dam during rainy seasons	<ul style="list-style-type: none"> The spillway should be regularly checked to ensure that it can accommodate the Probable Maximum Flood (PMF) flow within the available 1m free board without spilling at other parts of the dam structure. The silt traps will reduce velocity of surface runoff and thus minimize erosion of topsoil and consequently avert possible gully formation around the catchment. Inlets should be cleaned regularly, be able to direct all the water from the catchments area while silt traps facilitate deposition of silt away from the water pan during the rainy seasons which means that the silt traps can then be target for maintenance (de-silting) instead of the whole the water dam.
Rehabilitation of the project site	<ul style="list-style-type: none"> Implement an appropriate re-vegetation programme to restore the site to its original status and consider use of indigenous plant species in re-vegetation.

The full report of the proposed project is available for inspection during working hours at:

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT
FOR THE PROPOSED INSTALLATION OF AN INCINERATOR
FACILITY AT PLOT L. R. KARAI/LUSSIGETTI/1078, NACHU
AREA, LUSSIGETI WARD, NACHU VILLAGE, NACHU SUB-
LOCATION, KARAI LOCATION OF LUSIGETTI WARD IN
KIAMBU COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Takataka Solutions Limited, is proposing to install a modern incinerator on its leased land where they are currently licensed to carryout waste sorting with the intention of incinerating all the combustible hazardous waste including healthcare based wastes from the surrounding healthcare facilities in Nachu area such as Lussigetti Hospital. The proposed project is located on plot L.R. Karai/Lussigetti/1078, Nachu Area, Lussigeti Ward, Nachu Village, Nachu Sub-location, Karai Location of Lusigetti Ward in Kiambu County.

The following are the anticipated impacts and proposed mitigation measure:

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Overall environmental management	<ul style="list-style-type: none"> • Ensure full operationalization of the incinerator. • Avoid piling waste where it can be accessed by animals. • Avoid open burning of waste. • The project proponent is advised to put in place structural mechanisms that will ensure efficient environmental management strategies are adopted and reviewed from time to time to promote sustainable management of the environment. • In consultation with environmental experts and relevant lead agencies, the proponent to develop its own environmental policy, if none exists.
	<i>Healthcare Waste Management</i>
	<ul style="list-style-type: none"> • Ensure full operationalization of the incinerator always. • Avoid piling HCW where it can be accessed by animals. • The project proponent should know that the incinerator works best on well sorted waste. • The project proponent should ensure that all guidelines provided by the MOH on HCWM are followed to eliminate incidences of poor HCW management like the evident mix-ups. • It is important for the project proponent to train and retrain the staff involved in HCWM urgently. • Apply from NEMA for a waste disposal/incinerator operating license. • Develop a schedule that will ensure that HCW brought to the incinerator for disposal is never left outside the incinerator shelter.

*Impacts**Proposed Mitigation Measures*

- Fence the incinerator area tightly so as to keep off some stray animals such as dogs.
- Empty the organic waste composting pit and fence it off.

Noise Monitoring and Control

- Initiate full operationalization of the incinerator immediately by providing adequate diesel.
- Avoid open burning of waste to reduce on noise pollution from explosions.

Air Quality Monitoring and Control

To reduce on emissions, it is advisable adhering to the following practices:

- Firstly, initiate full operationalization of the incinerator always by providing adequate diesel and avoid open burning of waste.
- Secondly, ensure that the incinerator is functioning properly, and the chimney is clear of excessive soot.
- Rigorously segregate waste so that no unnecessary PVC (IVs, etc.) waste is incinerated.
- Ensure that the incinerator is preheated adequately and that supplementary fuel is added whenever necessary to maintain the burning temperature above 600C.
- Load the incinerator according to the recommended "Best Practices".
- Adopt rigid quality control measures.

Staff Awareness and Training

- There should be training and frequent retraining of all the project staff with respect to environmental management.

Environmental Management System Set Up, Suitability and Performance

- Formulate an environmental policy for the incinerator.

Compliance to Environmental Standards

- Comply with all set environmental standards such as applying for an Incinerator operation license as well.
- Carry out an environmental audit for the project annually.

Community
health and
safety issues

Operational Effectiveness of the Incinerator

- Ensure thorough sorting of waste to avoid organic wastes finding their way into the incinerator once full operationalization is done.
- Ensure regular servicing once full operationalization has been initiated.

Structural Safety of Project Infrastructure

- Install guards around the chimney to ensure that nothing can reach it.

Ash Pit

- There is need to construct a standard ash pit with a lockable cover. The ash pit should be large enough to store incinerated residues for at least 10 years without being emptied.

Occupation
safety and
health
management

Adequacy of the Design of the Shelter

- There should be provision for a fully equipped office with furniture and office accessories so as to assist in proper record keeping of the incinerator operations and activities

*Impacts**Proposed Mitigation Measures*

- There should be a bathroom with functioning shower head and adequate supply of water.
- There should be a toilet for the incinerator operators to avoid their having to share the mortuary pit latrine with mortuary attendants and clients.
- A store should be provided for within the incinerator.

Other than the above singled fundamentals, it should encompass other several elements, housed within the sheltered enclosure. These elements are:

- A storage box to keep tools, protective clothing and records.
- An enclosure with a lockable door to prevent access by children and unauthorized persons, as well as scavenging animals and birds.
- An access hatch through a wire-mesh wall of the incinerator to allow waste to be deposited when the incinerator shelter is locked and the operator is not present. This hatch should open into a safety-box deposit which should provide a protected area where the safety boxes (and containers from needle-cutters) can be deposited temporarily.

Receiving Healthcare Waste at the Incinerator

In the event of full operationalization of the incinerator and in the presence of the operator at the incinerator and waste is deposited at the incinerator, the operator should:

- Receive the waste, record the required details in the Waste-Deposit Record.
- Verify that any waste received is appropriately packaged -that is: Sharps in safety boxes; other waste in plastic bags, and needles in needle-cutter containers.
- And that there are no organic wastes brought to the incinerator.

When the operator is not present at the incinerator, the person delivering the waste should:

- Make sure that the safety boxes and plastic bags are properly closed.
- Deposit the safety boxes and plastic bags through the access hatch that is clearly labeled and designed for this purpose. The waste deposited here drops into the safety box deposit that is accessible only to authorized persons. At locations where a needle-cutter is used, deposit the needle containers through the access hatch that is used for the safety boxes and plastic bags. Thus this calls for the modification of the door to allow deposit of waste into the shelter even when the operator is not within the incinerator shelter.
- On returning to the incinerator site, the operator should arrange the safety boxes or plastic bags of waste which have been deposited through the waste hatch in the waste store.

The operator should also complete the Waste-Deposit Record for the newly arrived waste once he returns to the facility.

Security of the Facility

- Security of the facility should be guaranteed by ensuring that it is well fenced off to make sure that strangers do not access the incinerator area nor do dogs access waste.

*Impacts**Proposed Mitigation Measures*

- Dispatch a 24hour watchman to the incinerator area.

Personal Protection Equipment and Safety of the Incinerator Operator

Supply of at least two sets of PPE of the right quality is recommended. The set of the right PPE should include at minimum the following—

- eye goggles (medical grade);
- dust mask-appropriate grade;
- gumboots-appropriate grade;
- hand glove-appropriate grade;
- face mask-appropriate grade; and
- overall- covering the body and the head.

Exercising the following measures will ensure that the operator is safe—

- wearing the proper PPE at all times when operating the incinerator;
- washing hands regularly, hence why a hand wash basin with running water is needed within the incinerator shelter;
- being vaccinated against Hepatitis B Virus (HBV); and
- having regular medical checkups (every six months).

Fire Extinguishers

- The management should install fire suppression system before operationalization of the incinerator which should be serviced regularly to keep it effective at all times.
- The incinerator operators should be trained on how to operate the fire extinguishing system to be installed and fire drills should be undertaken from time to time.

First Aid Kits

- It is important that the facility is equipped with well-stocked first aid kits as well as training the incinerator operators on first aid administering from reputable first aid trainers.

Sanitation and Cleanliness

- The operators are encouraged to observe and maintain the highest levels of cleanliness possible.
- Measures should be put in place to ensure that wastes delivered when the operator is not in are not deposited outside the incinerator shelter. This should be done by creating safe boxes that would allow safe depositing of HCW when the operator is not within the incinerator area.
- Make a point of providing a sanitation facility to serve the incinerator alone.

Emergency Response Procedures

- It is recommended that the project proponent develops an emergency plan as well as constitute an Emergency Response Committee (ERC) that will entail staff from all departments. The members of the committee should be trained on emergency preparedness and response; the trained staff should in return be trainers of trainees to ensure that eventually all staff in all departments will be equipped with the necessary skills in emergency preparedness and response.

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
	<i>Work Injuries Benefit Cover</i>
	<ul style="list-style-type: none"> The management to have the Work Injuries Benefit (WIBA) Cover insurance cover put in place.
	<i>The Management in Relation to the Incinerator Facility</i>
	<ul style="list-style-type: none"> The operators should always be subjected to retraining to improve their skills and know how especially the basics like loading of wastes, minor maintenance procedures that go a long way in defining the health of the facility in the long run. The management should ensure there are at least two dedicated operators with long term contracts to inspire their morale. The operators should be subjected to regular retraining until they are well equipped with skills to navigate challenges likely to occur in the operations of the incinerator. Ensure adequate supply of fuel to the incinerator as well as ensuring full operationalization of the incinerator.
	Further to the above, the following operator-related measures should be adopted to ensure good incinerator performance once full operationalization is initiated:
	<ul style="list-style-type: none"> Only a trained, qualified and equipped operator should operate the incinerator. The operator must be on-site while the incinerator is functioning. The operator must be motivated to follow "Best Practices." The incinerator should be operated according to Best Practices to minimize emissions and other risks. The operator must have long-term contracts or be permanent hires. Mixed up waste delivered at the incinerator could be identified with better supervision at the point of waste generation and at the incinerator site.
	The responsibilities of the supervisor at the facility could include but not be limited to:
	<ul style="list-style-type: none"> Ensuring good waste segregation practices. Co-ordination and supervision of waste transportation, packaging, storage and handling. Monitoring of waste handling at the incinerator and other appropriate locations. Supervision of the incinerator operator; and Reporting.
Public consultation, participation and socio-economic issues	<i>Support for the Incinerator</i>
	The project proponent should not allow open burning of waste at the site.
	<i>Emissions and the Surrounding Community</i>
	<ul style="list-style-type: none"> The management should fully operationalize the incinerator and avoid open burning of waste at the site.
	<i>Scavenging Animals and Public Health</i>
	<ul style="list-style-type: none"> Fence off the incinerator site properly No open dumping of waste at the site Develop a schedule of delivering waste from the surrounding health care facilities Avoid open burning of waste.

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
	<i>Livelihood Value of the Facility</i>
	<ul style="list-style-type: none"> The project management is requested to consider the locals especially in hiring of causals Operationalize the incinerator fully.
	<i>Public Health and Sanitation</i>
	<ul style="list-style-type: none"> The project proponent should be ready to address the issue of any emission. Never allow open burning of waste.
	<i>Staff Awareness and Training</i>
	<ul style="list-style-type: none"> Owing to the dynamics associated with HCWM, regular refresher trainings should be done to make sure that the operators are equipped with the best knowhow with regard to handling HCW. It is also advisable that the management organizes for a training of the operators on operation of the incinerator to ensure that they are efficient in their tasks. Such retraining can be organized to be carried out by the incinerator installer.
Liquid waste management	<ul style="list-style-type: none"> It is upon the management to ensure that no liquid waste finds its way out of the incinerator compound by constructing adequate waste water handling systems such as a septic tank.
Storm water management	<ul style="list-style-type: none"> The project proponent is expected to ensure full harvesting of all roof water to be utilized in the cleaning of the facility and hence avoid unnecessary flooding of the project area as well as straining of the local water supply.
