THE ENVIRONMENTAL MANAGEMENT AND CO-ORDINATION ACT

(No. 8 of 1999)

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR CONSTRUCTION AND SUPERVISION OF THE PROPOSED CHOGORIA WATER SUPPLY PROJECT

INVITATION OF PUBLIC COMMENTS

Pursuant to Regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Tana Water Services Board, is proposing to undertake an Environmental and Social Impact Assessment (ESIA) Study Report for the proposed Water Supply Infrastructure for Chogoria Town planned to be financed under the Towns Sustainable Water Supply and Sanitation Project of the African Development Bank (AfDB). The Project area covers 280 km² which is in Maara Sub-County and borders Mt. Kenya Forest to the West, Tharaka Sub-County to the East, Meru County to the North and Meru South Sub-County on the southern border.

The following are the anticipated impacts and proposed mitigation measures:

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Loss of flora and fauna	<ul style="list-style-type: none"> Construction activities will be limited to Project sites/routes which already exist therefore limited destruction to vegetation cover.
Air pollution	<ul style="list-style-type: none"> Maintain construction equipment at high operational conditions such as to control emissions into the air. Earth moving be done under dump conditions as much as possible to prevent emission of dust into the air. Similarly, piled materials (sand and aggregate) should be maintained dump to prevent dust emissions. It will be necessary to notify the immediate neighbourhoods on the potential odours during the excavations. The period should, however, be kept as short as possible (odour generation may not be fully eliminated during the period).
Change of land/soil erosion	<ul style="list-style-type: none"> Re-plant the indigenous vegetation as much as practicably possible once work is completed. Limit vegetation clearance unless where unavoidable circumstances appear. Contain excavated soils so that they will not find their way into nearby water sources.

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
	<ul style="list-style-type: none"> • Cement mixing should be done in a designated area away at a safe distance from storm water drains. • Spilled cement or concrete should be collected and disposed away from natural water ways or storm water drainage. • Sensitize workers and enable them to properly handle concrete spillages or waste cement.
Interference with drainage and hydrology within project site	<ul style="list-style-type: none"> • Excavated channels to follow contours to avoid interference with surface drains. • Whenever necessary, drains along the construction line are directed towards existing drainage systems to cater for storm water during the rains. However, construction should be carried out during a dry season and should take the shortest period possible. • Utilise excavated soil to level excavated ground where necessary and cover the water and sewer lines that will have been laid in the ground. • Construction materials and other debris (lime, cement and fresh concrete.) should be handled carefully to prevent them from finding their way into the nearby water sources. • Ensure compliance with environmental laws. the water and sewer lines that will have been laid in the ground.
Generation of solid and liquid waste	<ul style="list-style-type: none"> • The contractor shall develop a comprehensive waste management plan prior to commencement of works. • Properly labelled and strategically placed waste disposal containers shall be provided at all places of work. • Litter bins should have secured lids to prevent animals and birds from scavenging. • All personnel shall be instructed to dispose of all waste in a proper manner. • Water containing pollutants such as concrete or chemicals should be directed to a conservancy tank for removal from the site where applicable. • Potential pollutants of any kind and form shall be kept, stored and used in such a manner that any escape can be contained.
Pollution of water resources	<ul style="list-style-type: none"> • Earth moving and excavations for the construction are carried out considering safety of the river and surface drainage. • Control siltation of rivers and other surface drains. • Ensure spilt oil does not discharge into water sources.
Loss of vegetation cover	<ul style="list-style-type: none"> • The contractor will ensure proper demarcation of the project area to be affected by the construction works. • Strict control of construction vehicles to ensure that they operate only within the area to be disturbed by access routes and other works. • Retention of trees and shrubs, where possible on the potential sites for screening of the visual impact. • Where the proposed route requires the removal of any vegetation, care will be taken

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
	to minimize the destruction or damage of trees.

The full report of the proposed project is available for inspection during working hours at:

*Impacts**Proposed Mitigation Measures*

Interference with drainage and hydrology within Project site

should be carried out rapidly in order to mitigate against erosion of soil through surface water runoff and wind erosion.

Generation of solid and liquid waste

- Utilize excavated soil to level excavated ground where necessary and cover the water and sewer lines that will have been laid in the ground.
- A site waste management plan should be prepared by the contractor prior to commencement of construction works.
- Spilled cement or concrete should be collected and disposed away from natural water ways or storm water drainage.
- Sensitize workers and enable them to properly handle concrete spillages or waste cement.
- Isolate solid wastes disrupted from the works during excavations for safe disposal.
- Ensure spilt oil does not discharge into water sources. Provide oil spill containment including concrete platform for servicing of construction equipment and holding of scrap oil drums.
- Ensure that the solid waste collection, segregation, and disposal system is functioning properly at all times during the construction phase.

Pollution of water resources

- Excavated channels to follow natural water course to avoid interference with surface drains.
- Whenever necessary, drains along the construction line are directed towards existing drainage systems to cater for storm water during the rains.

Water pollution of River Tungu and associated springs by construction activities which include solid and effluents waste

- Isolate solid wastes disrupted from the works during excavations for safe disposal. The wastes should be collected and disposed in approved sites.
- Earth moving and excavations for the construction are carried out considering safety of the river and surface drainage. Control siltation of rivers and other surface drains.

Loss of livelihoods

- Loss of livelihoods to be valued and compensated to ensure that project affected persons (PAPs) continue with their normal lives (or better) as before the project.

Occupational health and safety

- Establish a Health and Safety Plan (HASP) for civil works areas ensuring the working hours are controlled.
- Provide workers with gloves, ear gears, sturdy rubber boots and overalls to protect their skin from the effects of cement.
- Provide workers training on safety procedures and emergency response.

The full report of the proposed project is available for inspection during working hours at:

- Director-General, NEMA, Popo Road, off Mombasa Road, P.O. Box 67839-00200, Nairobi.
