THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED 18.5MW NYAMINDI CASCADE DEVELOPMENT IN KIRINYAGA COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, RAREH Eco Hydropower Company Limited, is proposing to develop an 18.5MW Nyamindi cascade development in Kirinyaga County. Under the proposed cascade development project, the head waters of River Nyamindi will be utilized to generate electricity power with three small hydro power projects. The combined capacity of the three SHPPs is 18.5 MW. The annual generation is estimated to be to the tune of 98,509 MWh of electricity.

The following are the anticipated impacts and proposed mitigation measures:

Impacts

Loss of aquatic
biodiversity

Habitat loss and
modification

Invasive species

Proposed mitigation measures

- Fell only the trees marked for felling; all other trees should be protected to save the forest cover in the forested area.
- Conserve riparian forests in the agricultural areas: reduce the vegetation clearance footprint.
- Establish more riparian forests of indigenous trees or environmental friendly ones in agricultural areas. This could be undertaken in keeping with the mitigation measures as recommended in the impact.
- Rehabilitate all degraded land during and following completion of construction activities.
- Install systems to discourage fish from entering abstraction equipment, including acoustic barriers, lighting barriers and bubble curtains.
- Retain forest cover in the forested area.
- Establish more riparian forests of indigenous trees or environmental friendly ones in agricultural areas.
- Rehabilitate all degraded land during and following completion of construction activities.
- Monitoring of biological and chemical parameters in the water and in aquatic biota to alert the proponent, relevant Government Agencies and local communities on potential hazards to aquatic habitat.
- Areas that will not be put to immediate use to be left intact.
- Excavation should not be carried out during the rainy(wet) season when animals are breeding.
- Top soil to be kept aside for use in replanting and landscaping.
- Together with experts relocate animals that move slowly and found in the site during excavation and clearing.
- Reestablish original habitat patterns to improve surface water runoffs before commencing operations.
- Establish erosion prevention measures on sloping areas to prevent soil erosion on loose soils after from excavation.
- Ensure that extensive damage to the forest should not be made by engaging heavy machinery for clearing and excavation work.
- Where possible use already established tracks and roads.
- Use of human labour (non-mechanized) during construction inside the forest to minimize damage to the forest habitat.
- The project proponent should compensate by rehabilitating/ restoring the modified habitat elsewhere.
- Habitat monitoring to detect and manage invasive species early before habitats is irreversibly modified.
- Project proponent to put in place invasive species control and management program.
- Trap and rid-off the site of any rodents which attract snakes.
- All workers be equipped with protective gear like heavy duty shoes and tough

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED MOI'S BRIDGE AND MATUNDA TOWNS SEWERAGE SCHEMES IN KAKAMEGA AND UASIN GISHU COUNTIES

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Lake Victoria North Water Services Board, is proposing to develop Moi's Bridge and Matunda Towns' sewerage schemes through funding from the Government of Kenya. The two towns are only 6 kilometers apart but due to topographical constraints, a combined sewerage scheme to serve both towns is not feasible. The schemes proposed include: wastewater collection systems; Wastewater Treatment Plants (WWTPs) and associated facilities; Sludge drying beds; and onsite sanitation facilities or pumping stations for areas that cannot be served by the centralized sewerage systems.

The following are the anticipated impacts and proposed mitigation measures:

Impacts	Proposed mitigation measures
Ecology	<ul style="list-style-type: none"> • Development and implementation of a

 - Programming of construction activities to start after harvesting season.
- Visual and landscape
- Reinstatement in accordance with the project's reinstatement specification.
 - Avoidance of the removal of existing mature trees which form important visual focal points.
 - Replacement of any removed trees during the reinstatement phase using indigenous species of local provenance.

 - Implementation of spillage prevention and control measures for hazardous materials in use and storage at sites.
- Energy Resources
- Minimize idling of machinery.
 - Avoid overloading of trucks and machinery.
 - Regularly service vehicles, plant and machinery.
 - Adopt energy conservation measures such as use of energy saving appliances in staff housing.
 - Explore renewable energy sources such as solar for lighting around facilities.
- Water Resources
- Programming of activities such that earthworks are completed during the short dry season of January and February.
 - Establish measures to control soil erosion and prevent spillage of pollutants.
 - Implement a rigorous monitoring programme in order to ensure that the new WWTPs operate effectively and as designed.
- Waste
- Land-fill spoils as much as possible within the sites or identified fill areas.
 - Felled trees, shrubs and stumps can be isolated for collection by locals as firewood.
 - Organic wastes can be composted on site.
 - Provide pit latrines at the camp(s) and construction sites for use by workers.
 - Vehicle maintenance to be done off-site (at the construction camp's garage/workshop or commercial garage) and wastes (used oil, oily rags, cans and used parts) disposed in a designated area.
 - Ensure that construction materials left over at the end of construction are used elsewhere rather than their disposal.
 - Put in place measures to ensure that construction material requirements are

	carefully budgeted and to ensure that the amount of construction materials left on site after construction is kept minimal.	Land acquisition	<ul style="list-style-type: none"> • Cash compensation based on market value of land or provide with option of replacement land within the village if available of equivalent size and quality. • Cash compensation to be provided for lost agricultural productivity during the construction period. • Reinstatement of land to a least the condition it was in prior to construction.
	<ul style="list-style-type: none"> • Avoid mixing of excess concrete if possible, and discard excess concrete in a designated area away from water courses. • Washing of concrete coated vehicles or equipment to be done off-site or in a designated wash area a minimum of 50 feet away from drainage channels. • Runoff from the on-site concrete wash area to be contained in a temporary pit where the concrete can set. • The temporary pit to be lined with plastic or clay to prevent seepage of the wash water into the ground.
