(No. 8 of 1999)

## THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT  
 FOR THE PROPOSED CONSTRUCTION OF TOWN HOUSES ON  
 PLOT LR. NO 12825/44 AND 12825/50 KASARINI-  
 TECHNOLOGY WARD IN KIAMBU MUNICIPALITY, KIAMBU  
 COUNTY

## INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of Environmental (Impact Assessment and Audit) Regulations, the National Environmental Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the construction of town houses on plot L.R. No 12825/44 and 12825/50 Kasarini-technology ward in Kiambu, municipality Kiambu County.

The Proponent (MAHA Properties Limited, P.O. Box195-00900, Kiambu) of the proposed project is proposing to construct town houses

on plot L.R. No 12825/44 and 12825/50 Kasarini-technology ward in Kiambu, municipality Kiambu County.

The following are the anticipated impacts and proposed mitigation measures:

## Expected Negative Impacts

## Recommended Mitigation Measures

High demand of raw materials

- Source building materials from local suppliers who use environmentally friendly processes in their operations.
- Ensure accurate budgeting and estimation of actual construction material requirements to ensure that the least amount of material necessary is ordered.
- Ensure that damage or loss of materials at the construction site is kept minimal through proper storage.
- Use of some recycled/refurbished or salvaged materials to reduce the use of raw materials and divert material from landfills.
- Specify locations for trailers and equipment, and areas of the site which should be kept free of traffic, equipment, and storage.
- Designate access routes and parking within the site.
- Introduction of more vegetation (trees, shrubs and grass) on open spaces and their maintenance., especially at the front side of the development
- Design and implement an appropriate landscaping program to help in re-vegetation of part of the project area after construction.

Increased storm water, runoff and soil erosion

- Roof water to be harvested and stored in underground reservoirs for use in cleaning and in the toilets. The tanks should have a capacity of at least 100, 000litres. To ensure the use of such water for the stated purposes, the building should be fitted with a dual water distribution system
- A storm water management plan that minimizes impervious area infiltration by use of recharge areas and use of detention and/or retention with graduated outlet control structure should be designed.
- Apply soil erosion control measures such as leveling of the project site to reduce run-off velocity and increase infiltration of storm water into the soil.
- Ensure that construction vehicles are restricted to existing roads to avoid soil compaction within and around the project site.
- Ensure that any compacted areas are ripped to reduce run-off.
- Site excavation works to be planned such that a section is completed and rehabilitated before another section begins.
- Construction of soil-galleys on sloppy sections.
- Open drains all interconnected will be provided on site.
- Roof catchments will be used to collect the storm water for some domestic uses e.g. washing of floors and cars

Increased solid waste

- Use of an integrated solid waste management system i.e. through a
