THE KENYA WILDLIFE CONSERVATION AND
MANAGEMENT ACT, 2013

THE KENYA WILDLIFE SERVICE (KWS)

THE KENYA NATIONAL HIGHWAY AUTHORITY (KeNHA)

PUBLIC NOTICE

PURSUANT to Section 38 of the Wildlife Conservation and Management Act, 2013 and in consultation with the Kenya Wildlife Service (KWS), the Kenya National Highway Authority (KeNHA) is seeking to utilize part of Nairobi National Park (NNP) for the construction of the Nairobi Southern By-pass Road.

The total protected area/wildlife habitat affected by the by-pass Road is 89 acres, along a distance of 4 km. stretching from Ole Sereni Hotel to Carnivore Restaurant. The shortest and longest distances that the By-pass Road dips into Nairobi National Park from the park boundary are 60 and 248 meters respectively. KeNHA in consultation with KWS has identified a parcel of land adjacent to NNP on the Ole Kasasi Adjudication Section along the Mbagathi Valley for purchase, acquisition and subsequent annexing to NNP in exchange of the land to be utilized by the By-pass Road

KeNHA has proposed to purchase and acquire the parcel of land and exchange the same with the section of Nairobi National Park Land that will be utilized for the By-pass Road, under the principle of "enhancing efficient wildlife conservation" to mitigate the impact of wildlife habitat loss to be caused by the By-pass road. The expected variation of Nairobi National Park boundary shall be to increase the park area by annexing the additional parcel of land for conservation as envisaged under section 38 of the Wildlife Conservation and Management Act, 2013. KeNHA has conducted the required Environmental Impact Assessments (EIA) in accordance with the provisions of the Environmental Management and Co-ordination Act (EMCA, 1999). The EIAs have shown that the proposed National Park land exchange shall greatly and positively enhance wildlife conservation in Nairobi National Park.

Pursuant to the Fourth Schedule of the Wildlife Conservation and Management Act, 2013, the General Public is hereby notified to inspect the details of this proposal at KeNHA Head office and KWS Headquarters, and provide written submission to the Director-General,

KeNHA, Blue Shield Towers, P. O. Box 49712-00100, Nairobi, and Director-General, KWS on or before 30th June, 2015. A one-day Public Consultation meeting/workshop has been organized on 3rd July, 2015 at the KWS Head office commencing 0900 hrs. during which oral presentations shall be submitted.

L. K. TONUI,
Ag. Director-General.

The proposed development will comprise of an eighteen (18) hole golf course, a club house, a five star Hotel and a Conference centre, and holiday houses, a theme park, a riding park and a botanical garden on circum 1400 acres parcel of land.

|-------------------------------------|--------------------|
| Environmental and Social impacts | Mitigation measure |
|-------------------------------------|--------------------|

- | | |
|------------------------|---|
| Demand of raw material | <ul style="list-style-type: none"> • Source building materials from local suppliers who use environmentally friendly processes in their operations. • Ensure accurate budgeting and estimation of actual construction material requirements to ensure that the least amount of material necessary is ordered. • Ensure that damage or loss of materials at the construction site is kept minimal through proper storage. • Use at least 5% to 10% recycled refurbished or salvaged materials to reduce the use of raw materials and divert material from landfills. |
| Vegetation disturbance | <ul style="list-style-type: none"> • Ensure proper demarcation and delineation of the project area to be affected by construction works. • Specify locations for trailers and equipment, and areas of the site which should be kept free of traffic, equipment and storage. • Designate access routes and parking within the site. • Introduction of vegetation (trees, shrubs and grass) on open spaces and around the project site and their maintenance. • Design and implement an appropriate |

| Increased storm water, runoff and soil erosion | <ul style="list-style-type: none"> • Surface runoff and roof water shall be harvested and stored in tanks so that it can be used for cleaning purposes. • A storm water management plan that minimizes impervious area infiltration by use of recharge areas and use of detention and/or retention with graduated outlet control structure will be designed. • Apply soil erosion control measures such as leveling of the project site to reduce run-off velocity and increase infiltration of storm water into the soil. • Ensure that construction vehicles are restricted to use existing graded roads. • Ensure that any compacted areas are ripped to reduce run-off. • Site excavation works to be planned such that a section is completed and rehabilitated before another section begins. • Interconnected open drains will be provided on site. • Roof catchments will be used to collect the storm water for some substation uses. • Construction of water storage tanks to collect storm water for substation uses. | | <ul style="list-style-type: none"> • Alternatively fuelled construction equipment shall be used where feasibly equipment shall be properly maintained • Sensitize truck drivers to avoid unnecessary running engines of stationary vehicles and to switch off engines whenever possible |
| | | Noise and vibration | <ul style="list-style-type: none"> • Sensitize construction vehicle drivers and machinery operators to switch off engines of vehicles or machinery not being use. • Sensitize construction drivers to avoid running of vehicle engines or hooting. • Ensure that construction machinery are kept in good condition to reduce noise generation. • Ensure that all generators and heavy duty equipment are insulated or placed in enclosures (containers) to minimize ambient noise levels. • Trees to be planted around the site to provide some buffer against noise propagation. • The noisy construction works will entirely be planned to be during the day time when most of the neighbours will be at work |
| | | Increased energy consumption | <ul style="list-style-type: none"> • Ensure electrical equipment, appliances and lights are switched off when not being use. • Install energy saving bulbs/tubes at all lighting points instead of incandescent bulbs which consume higher electric energy. |
| Increased solid waste generation | <ul style="list-style-type: none"> • Use of an integrated solid waste management system i.e. through a hierarchy of options: Reduction at source, Recycling, Reusing, Incineration, Sanitary land filling. • Through accurate estimation of the dimensions and quantities of materials required. • Use of durable, long lasting material that will not need to be replaced as often, thereby reducing the amount of construction waste generated over time. • Provide facilities for proper handling and storage of construction materials to reduce the amount of waste caused by damage or exposure to the elements. • Use building materials that have minimal or no packaging to avoid the generation of excessive packaging waste. • Reuse packaging materials such as cartons, cement bags, empty metal and plastic containers to reduce waste at site. • Dispose waster more responsibly by contracting a registered waste handler who will dispose the wastes at designated sites or landfills only. • Waste collection bins to be provided at designated points on site. | Increased water demand | <ul style="list-style-type: none"> • Water to be brought in from the City Water and Sewerage Company. Harness rainwater for office and gardening. • Install water conserving taps that turn-off automatically when water is not being used. • Promote recycling and reuse of water as much as possible. • Install a discharge meter at water outlets to determine and monitor total water usage. • Promptly detect and repair of water pipe and tank leaks. • Sensitize construction workers to conserve water by avoiding unnecessary toilet flushing etc. • Ensure taps are not running when not in use. |
| | | Generation of waste water | <ul style="list-style-type: none"> • Provide means for handling sewage generated at the construction site. Conduct regular checks for sewage pipe blockages or damages since such vices can lead to release of the effluent into the land and water bodies. • Monitor effluent quality regularly to ensure that the stipulated discharge rules and standards are not violated. |
| Dust emission | <ul style="list-style-type: none"> • Ensure strict enforcement of on-site speed limit regulations. • Avoid excavation works in extremely dry weathers. • Sprinkle water on graded access routes when necessary to reduce dust generation by construction vehicles. • Personal Protective equipment to be provided to employees and worn. | Statutory requirements | <ul style="list-style-type: none"> • Ensure compliance with The OSHA (Building Operations and Works of Engineering Construction Rules), L.N. 40 of 1984. |
