## THE ENVIRONMENTAL MANAGEMENT AND CO-ORDINATION ACT

(No. 8 of 1999)

## THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

## ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED LOWER KUJA IRRIGATION DEVELOPMENT PROJECT, NYATIKE DISTRICT, NYANZA PROVINCE

## INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of Environmental (Impact Assessment and Audit) Regulations, the National Environment Management Authority, (NEMA) has received an environmental impact assessment study report for the implementation of the proposed Lower Kuja irrigation development project.

The proposed project involves delineation of suitable areas for surface irrigation with the adopted option 2 of having a net irrigation area of 7,717ha. The main project components include:

- Intake at God Orango;
- Head works (weir, retaining walls, intake, protection works);
- Canals (Mains and tertiary)/ structures;
- Drains (mains and tertiary)/ structures;
- Canal and drain structures (drops, culverts, turnouts, division boxes, cross drainage structures, flumes, etc.)
- Access and farm roads; and
- Flood protection dykes.

The proposed project is located in Nyatike district, Nyanza province close to the shores of Lake Victoria within the Lower Kuja River Basin. The project area covers seven (7) locations and twelve (12) sub-locations in Nyatike and Karungu divisions.

The following are the anticipated impacts and proposed mitigation measures:

## Environmental issue

## Mitigation Measures

- |   |  |
|---|--|
| Permanent and temporary loss of land and structures               | • The National Irrigation Board will compensate the project affected persons (PAPs) before construction begins so as to ensure acquired land and property lost is compensated for.   |
| Economically displaced people                                     | • Valuation report will be produced during the full RAP study which will detail the extent of economic loss by the PAPs for compensation purposes.<br><br>• Measures should be put in place to reduce instances of loss of income or livelihoods during the transition period to the new system.   |
| Flooding  | • Strive to construct most of the canals to completion during the dry season.<br><br>• Regularize checks and inspection of the canals to avert blockages or leaks.   |
| Vegetation loss   | • The clearing of vegetation and trees should be strictly controlled and only done if it is absolutely necessary.<br><br>• Disturbed areas adjacent to the canals should be re-vegetated with indigenous grasses and trees after construction.   |
| Loss of habitat   | • Avoid all construction activities within key habitats, especially within the two identified wetlands.<br><br>• Wetlands which are of high ecological importance should be buffered by a minimum of 50m.  |
| Loss of migratory routes  | • The vegetation within the migratory routes should be left intact so as not to interfere with the free movement of animals;<br><br>• No construction wastes should be dumped along the hippopotamus migratory corridors.  |
| Soil erosion  | • The contractor must implement erosion control measures to avoid erosion in areas that are prone to erosion.<br><br>• All excavation works must be properly backfilled and compacted.   |
| Rivers and wetland pollution and introduction of invasive species | • Implement standard operating procedures for working in water, including checks on equipment condition, refueling at safe location, availability of spill kits and knowledge of their use, and emergency spill procedures.<br><br>• Apply standard best practice site sediment control procedures to minimize sediment loads in drainage waters returning to the river. |
| Construction wastes - solid wastes                                | • The contractor should enforce the appropriate management methods based on the three Rs (reduce, reuse, and recycle).<br><br>• The disposal site needs to be more than 100 meters from watercourses and in a position that will facilitate the prevention of storm-water runoff from the site from entering the watercourse.  |
| Construction wastes - wastewater and effluents                    | • All grey water runoff or uncontrolled discharges from the site/working areas should be contained and properly channelled.<br><br>• Water containing pollutants such as cement, concrete, lime, chemicals and fuels shall be discharged into a holding tank for removal from site.  |
| Oil spills  | • Vehicle maintenance should be done on purpose-built impervious concrete platforms with oil and grease traps.   |

Air quality and dust	<ul style="list-style-type: none"> <li>Standard operating practices for refueling mobile equipment such as a minimum 15m from any water channel should be practiced.</li> <li>Vehicles delivering soil materials should be covered to reduce dust.</li> <li>The contractor should provide dust masks to all personnel on dust-prone work sites.</li> </ul>
