Earth moving and excavations (vegetation clearance, channeling and site preparations)	<ul style="list-style-type: none"> • Provide notices, signage and information to the public for their safety at all locations. • Install barriers along walkways, crossings and public places affected by the works for public safety. • Where there are potential for nuisance from dust generation, ensure earth moving is under dump conditions (consider watering where necessary). • Inform immediate communities or stakeholders of the activities. • Construction activities will be limited to project sites/routes which already exist therefore limited destruction to vegetation cover. • Stock piling of top soil, construction material and wastes should be done only at designated sites approved by the supervising engineer, erosion prevention through berming of loose soil sites should be done in all areas susceptible to agents of erosion. • Notify public the intent to cut sections of the road for safety precautions. • Provide signage and safety information in all work areas. • Notify other services providers and open small sections that can be reinstated within the shortest period to avoid disruption of public services. • Mark the lines to avoid conflicts with other activities.
Materials sourcing, from borrow pits and quarries delivery and storage	<ul style="list-style-type: none"> • The contractor will be responsible for ensuring that appropriate authorization to use the proposed borrows pits and quarries have been obtained before commencing activities. • Topsoil shall be stripped prior to removal of borrow and stockpiled onsite. This soil shall be replaced on the disturbed once the operation of the borrow site or quarry is complete.

Potential Impact Management Actions

	<ul style="list-style-type: none"> • Construction material sources should be environmentally sustainable (approved accordingly). • Delivery routes and modes of transport should be approved. • Material storage on site not to be internal or external nuisance.
Concrete/ cement batching plant	<ul style="list-style-type: none"> • Where required, a Concrete batching plant shall be located more than 20m from the nearest stream/river channel. • Top soil removed from the batching plant site and stockpiled for reuse during reinstatement. • Contaminated storm water and wastewater run-off from the batching area and aggregate stock piles shall not be permitted to enter streams but shall directed to a pit where the water can soak away. • Suitable screening and containment shall be in place to prevent windblown contamination associated with any bulk cement silos, loading and batching. • Cleaning of equipment and flushing of mixers shall not resulting pollution of the surrounding environment.

Any complaints received by the Contractor regarding noise will be recorded and communicated to the RE. Where possible silenced machinery and instruments should be employed to reduce the impact of noise on the existing residents and workers. Construction hours should be limited to the hours of 8.00 a.m. and 6.00 p.m. daily. Provision of appropriate personnel protective equipment to the workers. The Contractor must adhere to Noise Prevention and Control Rules of April 2005.

Invasion by birds and reptiles to the waste water treatment plant	<ul style="list-style-type: none"> Provide secure barriers to keep off the animals from interfering with the plant operations and safety. In the event of larger wildlife e.g. hippos and crocodiles, TWWDA and KIRIWASCO will ensure appropriate consultations with the Kenya Wildlife Services (KWS) on appropriate management actions.
Grit, sludge and other solid wastes	<ul style="list-style-type: none"> The sludge will be temporarily held in sludge drying beds for sludge digestion and the dry cake will be safe for disposal. The dry cake can then be sold off/collected for disposal as organic fertilizer for use in local farms. Alternatively, in the event that uptake by local farmers is low, the dried sludge can be landfilled and covered with lime/earth at an appropriate location.
Health and safety risks from burst sewers	<ul style="list-style-type: none"> Ensure proper and periodic maintenance of sewer lines. Awareness rising among community members not to dump solids in manholes. Regular cleaning of grit chambers and sewer lines to remove grease, grit, and other debris that may lead to sewer backups.
Odor menace from waste water treatment plant	<ul style="list-style-type: none"> Storage of screenings and grit in closed containers (dumpsters) instead of on the ground and ensuring that all waste is hauled off-site on a scheduled and timely basis. Ensure appropriate covering/ventilation of the pre-treatment unit. The perimeter of the proposed site should be vegetated with trees and plants of varying heights thereby forming windbreaker and reduce dispersion of odour.
Risks of overflowing manholes due to blockage of sewers	<ul style="list-style-type: none"> Regular inspection of the system to ensure performance is maintained at high levels; Regular monitoring and sampling of the waste water at influent and effluent points as well as in the receiving water bodies; Communities living within the river basins where the trunk sewers will be constructed should be enlightened on dangers of using raw sewerage to irrigate farmlands.
