- Areas to be cleared, especially borrow pits and Camp sites must be cleared in such a way that damage to adjacent areas is prevented.
- Although all vegetation encroaching into the road reserve must be cleared to give room for visibility, this should be restricted to the RoW.
- Trees should be trimmed rather than removed wherever possible.
- To plant indigenous and native trees along the project road in all the above mentioned sites.
- The use of fuel wood by construction workers should be discouraged, workers to be encouraged to use clean energy sources.

the people in the project staff and residents through sensitization.

- Allowing the residents and businesses to form social groups and networks that build social capital.

*Physiography and geology*

- Soil erosion measure should be put in place.
- Maintenance of the slope gradient.
- Ensure that the site is reclaimed/rehabilitated in the decommissioning phase of the project.

- Waste oil to be collected by a NEMA licensed waste dealer.
- Excavations to avoid accelerating situations of soil erosion.
- Solid waste to be handled well by a licensed NEMA waste handler or better still the contractor should work together with the county to ensure that the waste is disposed-off appropriately and to the appropriate place.
