THE WEIGHTS AND MEASURES RULES, 1952

(G.N. 694 of 1952)

APPROVAL OF MEASURE PRESENTING NOVEL FEATURES

IN EXERCISE of the powers conferred by rule 20 of the Weights and Measures Rules, 1952, the Minister for Commerce and Industry hereby approves for trade use a pattern of measure of the following description:—

A number of 500-gallon measures are formed by the vertical subdivision of an oval tank. Centrally above each compartment is a raised filling point incorporating a calibrating rod and plate projecting downward into the raised portion of each compartment, but not reaching as far as the level of the top of the tank proper. At the lower end of the calibrating rod is a white enamel calibration plate marked with a heavy black line which indicates the level of 500 gallons of product, the transverse black line lying between two red triangular pointers on the plate. The calibration rod is mounted on the top cover plate of the raised filling point, and is protected externally by a covering cap drilled to receive sealing wire. The calibration rod is at the vertical centre-line of each compartment, and may be observed through a circular non-opening window which may be cleaned internally by a rotary wiper blade operated by a knurled knob on the outside of the window. The adjacent fill port has a metal strainer fitted on the inside which prevents access to the calibrating rod. The raised filling point is also fitted with a dip-stick which is in no way used in connexion with the final measurement of product, but is only used as a gauge to determine the progress of the filling operation. Each fill point is fitted with a pressure relief valve, and is connected into a common pressure relief line. At the discharge cabinet, the discharge line from each individual compartment terminates in a manually operated valve incorporating a sight glass, through which may be seen product in course of discharge. On the rear panel of the discharge cabinet, above each discharge valve is mounted a remote control connected by bowden cable to a safety cut-off valve fitted into the base of each compartment before the discharge line. The discharge cabinet also contains a connexion point for closed-circuit operation. Each discharge valve has a number embossed on it which corresponds to its respective compartment, identified by the same number painted on the raised filling point on the same side as the discharge cabinet. The figures and word "500 gallons" are painted on the inside of the cover plate of the observation window. The tank is mounted either on a self-propelled vehicle or on a trailer.

Sealing is effected at three points as follows:—

- (1) a wire passing through the drilled calibration rod cap and adjacent drilled bolt of the observation window mounting; and
- (2) a wire passing through the outermost drilled bolt of the observation window mounting and the adjacent drilled securing nut; and
- (3) a wire passing through two adjacent drilled securing nuts on the opposite side of the intake orifice to the calibrating rod.

Operation

Both valves are closed by raising the respective operating handles to the upper position. The tank compartment is then filled to the heavy black line on the calibrating plate. External discharge hose is then connected in position. The remote control handle is moved to the downward position, whence product may be observed to reach the sight glass, the discharge valve being opened, cessation of flow of product indicates the discharge of the 500 gallons. The remote control handle must remain in the downward position until discharge is complete.

Detailed drawings and photographs of the measure have been lodged with me at the Ministry of Commerce and Industry, Nairobi, and copies thereof may be inspected upon application to the Superintendent of Weights and Measures at the headquarters of the Weights and Measures Department, Campos Ribiero Avenue, Nairobi, during office hours.

Dated this 6th day of September, 1962.

M. MULIRO,

Minister for Commerce and Industry.
