THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED DECENTRALISED TREATMENT FACILITY (DTF) PROJECT IN GATURIA SUB-LOCATION, MUHITO LOCATION, MUKURWEINI SUB-COUNTY, NYERI COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Othaya Mukurweini Water Services Company proposes to develop a decentralized treatment facility with capacity of 50 m³/day and associated components operator's house, incinerator and a fence around the facility. The proposed project is located on parcel of land plot number (Muhiti/Gatura 692) is fully owned by County Government of Nyeri measuring a total of 0.5 acre in Gaturia

Sub-location, Muhito Location, Mukurweini Sub-county, in Nyeri County at GPS Co-ordinates of 282916.72 m E, 9936700.54 m S, UTM Zone 37M, WGS 84 Spheroid. The proposed intervention overall goal is to improve the health and access to waste treatment management for the residents of Mukurweini Sub-County especially in Mukurweini Town. It is anticipated that 10,720 residents in this area will benefit in this project.

The following are the anticipated impacts and proposed mitigation measures:

Impact	Proposed Mitigation Measures
Loss of vegetation cover and increased soil erosion	<ul style="list-style-type: none"> Areas with exposed soil should be replanted with grass as soon as possible after construction; to help mitigate against flash flood caused soil erosion. No unnecessary removal of any vegetation shall be done. The riparian area should be conserved and the area enhanced with suitable riparian vegetation. Maintain the riparian reserve of twice the width of the river undeveloped. Suitable trees should be planted at the periphery of project site and near the river bank.
Waste handling and disposal	<ul style="list-style-type: none"> Develop a solid waste management plan prior to project commencing, identifying optimal waste re-use options and disposal in licensed sites. Comply with EMCA (Waste Management) Regulations, 2006. Labelled waste bins should be strategically placed at the construction site. Provision of adequately designed bins to prevent access by vermin. The bins at the construction site should be emptied regularly to prevent overfilling. Disposal of the bins contents should be done at an approved disposal site. Controlled use of materials on site. Erect warning signs against poor waste disposal for example burning at site. Sensitization of workers on waste handling and disposal methods. Encourage and practice reuse and recycling. Provide sludge drying beds in the project.
Occupational health and safety	<ul style="list-style-type: none"> Develop a site safety action plan detailing safety emergency procedures in line with OSH Act, 2007. Reporting and recording of health, safety and environmental incidences. Erect warning signs on site warning residents and visitors of inherent danger posed in the construction site and restricting access at all times. Provide personal protective equipment to workers and anyone accessing the site. Develop a monitoring programme to assess noise performance in accordance with the revised Noise Prevention and Control Rules (April 2005); and NEMA Noise Control Regulations, 2009.
Excavation and earthworks resulting into stock piles, soil erosion	<ul style="list-style-type: none"> Excavation should be carried out such that drainage is controlled and water is not allowed to accumulate at the project site. Establish controls for surface runoff during excavation e.g. digging trenches.

Impact	Proposed Mitigation Measures	Impact	Proposed Mitigation Measures
	<ul style="list-style-type: none">Control excavation activities to be confined to the construction site only.Screening off the site using iron sheets to limit access to the site.Use the excavated soil as back fill in areas that need to be backfilled.Excavated and piled soils should be covered when there is rainfall to prevent it from causing sedimentation in River Ruarai.	<div>maintenance/impacts on the local river and the neighborhood</div> <div>distribution system at DTF.</div> <ul style="list-style-type: none">Maintenance of access routes and the drainage system.Manage solid wastes and dispose it appropriately at NEMA licensed facilities.Monitor water quality, upstream and downstream and at the point of discharge.	
Noise and dust during construction	<ul style="list-style-type: none">Construction work shall be done during day time hours from 8.00 a.m. to 5.00 p.m.Control working hours to limit noise, dust and traffic nuisance. Noisy construction activities should be scheduled to hours with minimal interruption for residents.Sprinkle water on areas where dust is likely to be generated.When excessive noise is anticipated, acquire a license from the county government and follow NEMA regulations and orders.	<div>Drainage management</div> <ul style="list-style-type: none">Proper project site drainage management to Control erosion.Avoid ponding water.Proper waste and material handling, and storage to avoid flushing of wastes in to the neighboring river.Follow designs made for the system.

THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT VARIATION IN THE PROPOSED PROJECT DESIGN FOR THE PROPOSED LOKICHAR TO LAMU CRUDE OIL PIPELINE (LLCOP) IN TURKANA, SAMBURU, ISIOLO, MERU, GARISSA AND LAMU COUNTIES

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project

The proponent, LLCOP Joint Development Agreement Partners represented by Pipeline Project Management Team (PPMT). The LLCOP Project is a stand-alone element of the Lamu Port, South Sudan, Ethiopia Transport Corridor (LAPSSET), a key component of the Kenya 2030 strategic vision. Land required for the LAPSSET Corridor will be acquired by the Government of Kenya (National Lands Commission, supported by Ministry of Lands and Physical Planning) by compulsory acquisition under the terms of the Land Act (2012) and transferred to the LAPSSET Corridor Development Authority (LCDA) who will then lease land required for the pipeline corridor to the Project.

The pipeline corridor will pass through six counties (Turkana, Samburu, Isiolo, Meru, Garissa and Lamu). The route selection process has incorporated engineering design, constructability, accessibility and logistical factors into the final route selected.

The LLCOP Project will be constructed in the 500m wide LAPSSET Corridor, which will also accommodate roads and a standard gauge railway (Lamu/Garissa/Isiolo and Isiolo/Lokichar) and utilities (water and power transmission lines). The LLCOP Project component will require a temporary 26m right of way (RoW) 'working width' for construction and a permanent 6 m wide easement to provide access during the life of the Project. In addition other land will be required for temporary construction facilities and a number of permanent pumping stations and other above ground facilities (Stations) along the length of the pipeline. Stations are small stand-alone facilities that contain the infrastructure needed to support the operation of the oil pipeline.

The LLCOP Project is designed to provide transportation, storage, and export facilities for crude oil produced from the oilfields in the South Lokichar Basin in Turkana and processed at the Central Processing Facility (CPF) at Lokichar, to a Load Out Facility (LOF) at the Lamu Marine Terminal (LMT), located within the new Lamu Port development. The pipeline will be heated and insulated to maintain the oil at a temperature to maintain its optimum flow characteristics. The pipeline will be buried along its entire 823km length, the minimum depth of cover along the majority of its length will be 0.9m, however, in rocky areas, the minimum depth of cover may be reduced to 0.6m.

There are 16 stations along the pipeline route between the CPF (not within the scope of this ESIA) and the LMT. The first pump station (PS1, which houses oil transportation pumps used to pump oil along the pipeline) is located at the Lokichar Export Facility (LEF), with 16 intermediate stations including a booster pump station at Station 4 (PS2), a pressure reduction station (PRS) at Station 9, and various other stations serving multiple functions that are co-located (e.g. power generation, block valves, launcher/receiver stations etc). The LMT consists of an onshore crude oil storage tank farm and ancillary facilities/equipment and a Load Out Facility (LOF) to transfer crude oil to export tankers moored at the Lamu Port.

An earlier advertisement of this ESIA was made on the 17th and 25th December, 2019. A variation in the proposed Project design from crude oil storage at the Lamu Marine Terminal (LMT) from a permanently moored floating storage and offloading (FSO) vessel to an onshore tank farm as well as a route re-alignment in Garissa necessitated additional assessment and the preparation of an

Addendum to the ESIA Report. All documents are available for review.

A summary of the potential impacts identified and proposed mitigations set out in the Addendum, is set out below:

<i>Topic /Aspect</i>	<i>Impact</i>	<i>Project Phase</i>	<i>ESIA Mitigation</i>
Air quality management	Vehicle and equipment exhaust	Construction /Operations	<ul style="list-style-type: none"> Where reasonable and practical, vehicles and equipment will be turned off when not in use, leaving vehicles idling for extended periods will be avoided unless weather and/or safety conditions dictate the need for them to remain turned on.
Air quality management	Machine / vehicle emissions	Construction /Operations	<ul style="list-style-type: none"> All equipment will be operated and maintained in line with manufacturer's recommendations, using appropriate fuel and will be monitored with periodic inspection and audits.
Air quality management	Dust and debris	Construction	<ul style="list-style-type: none"> Where practical, trucks transporting dusty material associated with the project will be covered to prevent escape of materials during transport.

After two rounds of monitoring showing no material exceedance of air quality standards, confirmatory monitoring will only be undertaken thereafter in response to a complaint or at the request of NEMA.
Noise management	Construction noise	Construction	<ul style="list-style-type: none"> At locations where construction noise will

The EPC Contractor will liaise with local residents and will implement appropriate measures (such as work times and phasing of work etc) to limit the impact of noise. Monitoring will be carried out prior to and during construction to confirm baseline levels and maintain impacts as acceptable during construction.
Water resource management	Changes in riverbed morphology – direct change to river flows	Construction / Operations	<ul style="list-style-type: none"> Post construction, excavated areas will be reinstated to reflect the original riverbed geomorphology. Any maintenance or operational activities will not take place in ephemeral rivers or watercourses without relevant permissions.
Water resource management	Contamination of water resources	Construction /Operations	<ul style="list-style-type: none"> The pipeline and its facilities will be designed to comply with all applicable Kenyan Laws and Regulations, and applicable international design codes and HSE standards, as well as international good practice – specifically the World Bank Group EHS Guidelines and IFC Performance Standards.
