THE ENVIRONMENTAL MANAGEMENT AND CO-ORDINATION ACT

(No. 8 of 1999)

THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED MALINDI AIRPORT RUNWAY EXPANSION PROJECT IN KILIFI COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Kenya Airports Authority, proposes to expand the Malindi Airport Runway through the construction of an approximate 1km extension to bitumen surface which will affect 9 villages; Majivuni J.C.C, Kalimani Poa, Majivuni, Ziwani, Bondeni, Furunzi A, Furunzi B, Majivuni B and Mtangani, fencing (chain link and barbed wire fence), storm water drainage works, associated facilities and amenities in Malindi Town, Kilifi County.

The following are the anticipated impacts and proposed mitigation measures:

| Possible Impacts | Mitigation measures |
|------------------|---|
| Impacts | of • Strip and stockpile topsoil from borrow pits and |

| <i>Possible Impacts</i> | <i>Mitigation measures</i> | <i>Possible Impacts</i> | <i>Mitigation measures</i> |
|--|--|--|--|
| obtaining construction materials | <ul style="list-style-type: none"> quarries for use in site restoration. Close all borrow pits and quarries in accordance with an approved plan to maximize future use and minimize health and safety hazards. Re-use excavated materials from the works as fill. | | <ul style="list-style-type: none"> storage and handling of fuel to prevent the risk of spillages. Train staff on control of emergency oil spill containment and communication procedures. |
| Impacts on businesses and traffic flow | <ul style="list-style-type: none"> Avoid transporting materials during periods of peak traffic activity. Provide alternative routes for traffic where total closure of roads is expected during trenching. Erect appropriate road Signs to warn road users of the construction activities. Construct an additional lane to the airport to decongest traffic along the adjacent Mombasa – Malindi Road. Vehicles should be controlled at entry and departure points from the airport by traffic police to avoid traffic jams at the adjacent Mombasa – Malindi Road. Increase parking slots at airport parking section to accommodate increased traffic. | Surface and groundwater contamination | <ul style="list-style-type: none"> Construct oil-water interceptors or spill trays to capture discharge of oils, fuels and other polluting liquids. Provide pit latrines/portable toilets at the camp and construction sites for use by workers. Sensitize workers not to dump waste generated from camps and construction sites into rivers/wells. Proper siting of waste disposal or fuel storage areas away from storm water impacts. Hazardous materials must be stored in a specific and secured area to prevent pollution from spillages and leakages. Stabilize storm water discharge points through robust designs to avoid soil erosion and siltation. |
| Air pollution | <ul style="list-style-type: none"> Service and maintain machinery according to manufacturer's instructions to improve fuel combustion and reduce exhaust emission to the atmosphere. Sprinkle water on access roads, stockpiles and cleared areas to minimize dust pollution. Cover all vehicles ferrying construction materials such as sand or aggregate to avoid dispersal of particles/dust along the roads. Provide personal protective equipment gear such as dusk masks to workers who may exposed to excess dust. Impose vehicle speed limits to 10 km/h in all areas within the site boundaries. Set up air quality monitoring program at the airport as basis for further mitigation measures. | Storm water impacts | <ul style="list-style-type: none"> Construct efficient and effective storm water management structures to avoid flooding at the airfield during construction and operation phase. |
| Noise pollution | <ul style="list-style-type: none"> Schedule road traffic movements to normal working hours (08H00 –17H00). However one can apply to NEMA for permit to construct beyond this period. Proper maintenance and servicing of equipment and machinery used during construction and operation phase. Provide personal protection equipment such as ear muffs to workers operating in noisy places. Avoid unnecessary hooting and revving of engines. Conduct regular noise monitoring at the airport to detect deviations from predicted noise levels and enable corrective measures to be taken where necessary. | Impact on physical infrastructures | <ul style="list-style-type: none"> The proponent (KAA) should liaise with the service providers (electricity, water, sewage and roads) to plan for the re-routing and reconnection of the services before project construction commences. The service providers should ensure that infrastructure and services are restored within the shortest time possible to avoid disruption of businesses. Any land to be acquired as way-leave for re-routing infrastructure or damage to property shall be adequately compensated in compliance to the existing national laws. Adequate and appropriate road signs should be erected to warn road users of closure of roads and direct them to alternative roads. |
| Solid and liquid wastes | <ul style="list-style-type: none"> Develop a Waste Management Plan to guide the handling, storage, transport and disposal of solid and hazardous wastes in compliance with Solid Waste Regulations, 2006. Recycle or re-use solid wastes where applicable in line with sound environmental management practices. THE ENVIRONMENTAL MANAGEMENT AND CO-ORDINATION ACT

(No. 8 of 1999)

THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED CHEPARERIA TOWN SEWERAGE PROJECT IN WEST POKOT COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Rift Valley Water Works Development Agency (RVWDA), proposes to construct a Chepareria Town Sewerage

project of an approximate length of the conveyance system around 11km of sewerage network and a WWTP to cover Chepareria Town in West Pokot County.

The following are the anticipated impacts and proposed mitigation measures:

| Possible Impacts | Mitigation measures |
|---------------------------|---|
| Loss of land and property | <ul style="list-style-type: none"> • Prepare a Resettlement action plan, this shall identify all the affected persons and proposed the compensation which is fair. • Land compensation should be carried out before the implementation of the project. • The vulnerable groups identified by the RAP shall be accorded a special care by the Proponent. • RAP Implementation Supervision. |
| Labour recruitment | <ul style="list-style-type: none"> • Priority for most work to be done during the construction and operational phases should be given to locals, if they have the skills to undertake the work. • Employment of out-of-area people should only be considered if the local community does not have the required skills. • Employment of women, marginalized people and people with disability should be encouraged. |
| Loss of fauna and flora | <ul style="list-style-type: none"> • Retention of trees and shrubs, where possible on the potential sites for screening of the visual impact. • Where the proposed route requires the removal of any vegetation, care will be taken to minimize the destruction or damage of trees. • Re-planting of destroyed trees in cleared areas where works are complete. • Workers should refrain from killing species (big or small) that may be found on and around the site. • Workers should refrain from disturbing, killing or stealing locals' animals and/or small soil animals species found on site. • Environmental awareness on the importance of biodiversity preservation should be provided to the site contractors and workers. • With regards to the vegetation on or within proximity of site, the following mitigation measures should be implemented. • Even if certain vegetation is found within actual site footprint, this does not mean that it should be removed. Therefore, care should be taken when preparing the site without destroying the vegetation. • Vegetation found on the sites, but not on the site infrastructure footprint should not be removed or disturbed in any way, but should be left to preserve biodiversity on the site. • Environmental awareness on the importance of biodiversity preservation should be provided to the workers. |
| Soil erosion | <ul style="list-style-type: none"> • The construction work should be carried out during the short rains to minimize the exposure of loose soil to surface runoff. • Phasing of site clearance should be considered so as to minimize the area of exposed soil at any given time. • Back fill and compact excavated areas as soon |

| | as the laying of trunks is done. | | 101 (1) of OSHA 2007. |
| Air quality/pollution | <ul style="list-style-type: none"> The contractor should prepare a waste management plan. The contractor should engage a licensed waste handler to properly handle, collect and dispose waste generated from the construction site. A waste minimisation approach should be adopted as part of the construction works. Skips and bins should be strategically placed within the campsite and construction site, they should also be adequately designed and covered to prevent access by vermin and minimize odour. They should also be emptied regularly. | | <ul style="list-style-type: none"> Reuse or recycle some materials which may be considered as waste or give them to people who may consider them useful for others uses. |
| Noise vibrations | <ul style="list-style-type: none"> Construction of the proposed access road should be closely monitored and dust should be suppressed by sprinkling water. Manage excavated soil by covering those that are not of immediate use. Carefully control access road works such that minimal dust is generated and whenever earthworks are being undertaken, then dust suppression should be implemented continuously. Restrict excavations to the project foot-print to minimize surfaces exposed to wind erosion. Ensure contractor's staff working at high dust generating sites are provided with appropriate PPEs to include dust masks and / or suitable aspirators. The contractor should inform the management of sensitive institutions on the days that excess dust is likely to be generated so they can be prepared. The same applies to works along the urban centers. | Increased traffic flow | <ul style="list-style-type: none"> Provide for adequate space at the entrance/exit along the access road to give drivers enough room to maneuver into and out of the project site; Provide for adequate parking spaces at the site; Provide road signage to alert road users of the presence of the facility and check for incoming or out-going vehicles; and Properly plan transportation of materials to ensure that vehicle fills are increased in order to reduce the number of trips done or the number of vehicles on the road. |
| | | Impacts on public and occupational safety and health | <ul style="list-style-type: none"> Proper supervision, high workmanship performance, and provision of adequate safety measures will suppress the likelihood of such impacts on public and occupational safety. |
| | | Potential damage or disturbance to private properties | <ul style="list-style-type: none"> The contractor and its project contractors should inform their workers on the importance of respecting the locals' properties by not intruding or damage their homes, fences or killing their livestock. Any workers or site employees that will be found guilty of intruding peoples 'privately owned properties should be called in for disciplinary hearing and/or dealt with as per their employer's code of employment conduct. Site workers should be advised to respect the community and local's private properties, values and norms. No worker should be allowed to wander in people's private yards or fences. Site workers are not allowed to kill or in any way disturb local livestock. No worker should be allowed to, without permission cut down or damage trees belonging either to the neighbouring homestead or in the community. |
| Construction wastes and pollution | <ul style="list-style-type: none"> Implement a standard set of feasible dust control measures at the site such as Covering all trucks hauling soil, sand and other loose materials and/or require these trucks to maintain at least two feet of freeboard; Watering all dust-active construction areas to suppress dust emissions; and Paving or applying water when necessary or applying non-toxic soil stabilizers on all unpaved access roads and parking areas. Reduce exhaust emissions by implementing the following: Advice drivers at the site to minimize vehicle idling time; Properly tune all equipment and maintain them in good working conditions; and Properly plan the transportation of materials and ensure that vehicle fills are increased so as to reduce the number of trips done and the numbers of vehicles on the roads. Handle chemicals and other potential pollutants carefully and appropriately. Have a fully equipped first aid kit at the site at all times and ensure that trained first aid personnel are available to handle any incidents due to pollution at site. Provide all construction workers with personal protective equipment (PPE) including masks, goggles, scarfs, boots and overalls among other protective clothing as spelt out under section | Contamination of water resources | <ul style="list-style-type: none"> The treatment pond should be made as impermeable as practically possible in order to prevent possible contamination of ground water or shallow wells in the area. The sewer line will be regularly inspected and maintained in order to safeguard against sewer line blockages and bursts. Monitoring of the quality of effluent will be on a daily basis. Effluent quality analysis reports will be submitted to NEMA on a quarterly basis. Proper operation of the entire sewerage treatment system will be ensured and monitored for deviations to guarantee that effluent from the treatment pond meets the required standards. The water quality of the receiving streams will be monitored to check on changes on its quality. To prevent flooding into the ponds, a properly made embankment should be constructed around the ponds to prevent storm water mixing with sewer, since this may fill up the treatment ponds causing overflow. |

- Desludging of the ponds should be carried out every 3-5 years.
- Flood hazard
- Designed surface water drainage structures around the waste stabilization pond site to prevent storm water inflow into the ponds.
- Impacts on rivers
- Desludging the ponds every three years.
 - Frequent monitoring of the water being discharged into the rivers.
