THE KENYA INFORMATION AND COMMUNICATIONS ACT

(Cap. 411A)

NEW FRAMEWORK FOR QUALITY OF SERVICE ASSESSMENT OF TELECOMMUNICATION SYSTEMS AND SERVICES

1. Background

The Communications Authority of Kenya (CA) is the National Regulatory Authority for the Information and Communications Technology (ICT) Sector in Kenya. CA wishes to notify the general public that it has revised the Quality of Service (QoS) Assessment Framework for mobile communication services.

Article 46 of The Constitution of Kenya, 2010, provides that consumers have the right to goods and services of reasonable quality, among other rights and applies to goods and services offered either by public entities or private persons. Section 23 of the Kenya Information and Communications Act, 1998, mandates the Authority to ensure, so far as is reasonably practical, the provision of telecommunication services as are reasonably necessary to satisfy public demand and to protect the interest of consumers with respect to the quality of such services, among other aspects of the services.

Vides the Kenya Gazette Notice No. 9853 of 11th September 2009, CA published the first regulatory framework for “Quality of Service (QoS) standards for GSM systems. Considering the changes that have occurred in the ICT sector particularly with regard to increased public reliance on a wide range of ICT services in the past eight years the Authority found it necessary to review the framework, the approach and methodology for the assessment of quality of telecommunication services. The review was earlier subjected to a public and stakeholders’ consultation process before adoption.

Pursuant therefore to Section 23 part (1&2a) of the Kenya Information and Communications Act (KICA), 1998 and Sections 14,15,16,17 and 18 of the Kenya Information and Communications (Licensing and Quality of Service) Regulations, 2010, the Director-General of the Communications Authority of Kenya (CA) hereby notifies the general public and key stakeholders (Mobile Network Operators and other interested stakeholders) that the Authority has adopted a new framework for the Assessment of Quality of Service (QoS) for mobile services in the country.

A comprehensive version of the new framework is available on the Authority’s website at www.ca.go.ke. The various components of this new framework will take effect on various dates starting from 1st of December 2017.

2. Highlights of the new QoS Assessment Framework

2.1 Scope of Services to be covered

The scope of the new QoS Assessment Framework has been expanded beyond voice and now comprises of Mobile Voice Service, Short Message Services (SMS) and Data/Internet services.

2.2 Quality of Service Assessment Components

The new QoS Assessment Framework is based on three main components that constitute the overall assessment of a service quality. These are Network Performance (NP), End-to-End Quality of Service, and Quality of Experience (QoE) as expounded below and in Table 1:

- Network Performance (NP) – gives an indication of the quality of the network infrastructure,
- End-to-End Quality of Service - gives the indication of the quality of the network infrastructure together with the end user devices.
- Quality of Experience (QoE) – gives the indication of the quality of the network infrastructure together with the end user devices from the perception of the customer.

Table 1: Quality of Service Assessment Components

Type of (QoS) Assessment Component	Nature of the QoS Assessment Component	Source of QoS Assessment Data
Network Performance	The Quality of the Network Infrastructure without terminal Devices	Operator’s Network Management Systems
End-to-End (QoS) Performance	The Overall Quality of the Network including Standardized Devices	Drive/Walk field tests
Quality of Experience (QoE)	Overall Consumer Experience.	Customer Satisfaction Surveys

2.3 Performance Indicators (KPI) for Network Performance and End-to-End Quality of Service and their Targets

Details of the Key Performance Indicators (KPI) and targets for both the Network Performance and End-to-End Quality of Service components for the various services whose quality service is under consideration are as indicated in Table 2 below.

Table 3: Key Performance Indicators (KPI) for Network Performance and End-to-End Quality of Service and their Targets

2.4 Quality of Experience (QoE)

Data on the Quality of Experience (QoE) component will be based on Annual Customer Satisfaction Surveys, which will give indicators on customers' perception relating to a variety of QoS aspects such as Network Availability, Service Quality, Service Tariffs, and Customer Care among others.

2.5 Aggregation of QoS Assessment Components

In order to arrive at the overall QoS assessment of a service the above 3 components shall be aggregated based on a weighting system, which shall be adjusted progressively towards the desired weighting ratios that will be attained in year 3 as indicated in table 1 below.

Table 2: Weighting Structure of QoS Assessment Components

Year	Component Weighting in Assessment		
	NP	End-to-End QoS	QoE
1st Year	0%	100%	0%
2nd Year	30%	70%	0%
3rd Year and beyond	25%	60%	15%

2.6 Data Capture & Sourcing Approach.

2.6.1 Overall Network Performance

Respective network operators and services providers will submit to CA on monthly basis the network coverage and the overall network performance data and analysis based on data obtained from the operations & maintenance facilities of their network.

Raw quality of service data shall be transmitted automatically by the operators' systems to a CA's server on an hourly basis. In addition, operators will analyse the same data and submit the respective reports in an agreed format to CA. The reports should have sufficient details and the sampling methodology specified in order to enable the Authority to verify the accuracy of the report submitted. Recommendation ITU-T E.804 will be the general guiding standard in this respect.

2.6.2 End-to-end quality of service (QoS):

The Authority, or its appointed agent(s), will use any or all of the following mechanisms to extract data on end-to end QoS parameters.

- Specialized stationary or mobile units.
- Subscriber handsets installed with appropriate software and programmed to transmit raw data to a central server
- Traditional walk/drive-test system

2.6.3 Quality of Experience (QoE)

QoE will be determined based on annual Customer Satisfaction Surveys undertaken with a view to eliciting customers' views relating to Network Availability, Service Quality, Service Tariffs, and Customer Care aspects among others.

3. Treatment of Results and Non-Compliances

A licensee will be deemed compliant in respect of QoS if it attains an overall aggregate performance achievement of 80% or above.

3.1 Publication of Results

The results of the QoS performance assessment of each network operator shall be published on CA's website and/or in local dailies for the information of the public and the ICT industry as a whole.

3.2 Enforcement of Non-Compliance

In the event of failure by a Licensee to attain the minimum compliance level of 80%, such licensee will be notified of the contraventions, remedial orders given and penalties applied in accordance with the prevailing legal and regulatory provisions in this regard. Any falsification of data/reports by a licensee will attract severe penalties in addition to other measures that CA may prefer.

4. Transition from Current Framework to New Framework

This framework has been developed based on international standards and best practices and has also taken into account inputs from various respondents received through both the stakeholders' and public consultation phases.

Given the incorporation of additional components in the assessment framework for mobile systems and services QoS, the implementation will be carried out in phases to provide for a smooth transition.

The table below provides for the various implementation phases.

Phasing Period	QoS Assessment Components & Contribution Ration			Phasing Framework Implementation
	End-to-End (E-to-E)	Network Performance (NP)	Quality of Experience (QoE)	
2017/18	100%	0%	0%	Piloting NP
2018/2019	70%	30%	0%	Implementation of NP and Piloting QoE
2019/2020 and beyond	60%	25%	15%	All 3 QoS Assessment components in use

THE ENVIRONMENTAL MANAGEMENT AND CO-ORDINATION ACT

(No. 8 of 1999)

THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED INSTALLATION OF SOLID WASTE INCINERATOR ON PLOT NO. MITI MINGI/MBARUK BLOCK 4/710 AT LALWET IN NAKURU COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Health Advantage Kenya Limited, is proposing to mount commission and operate a private commercial incinerator at Lalwet in Nakuru County. The commercial incinerator will have a capacity of 0.5 tonnes per day and is designed to have one operator, a store, and the incinerator components.

The following are the anticipated impacts and proposed mitigation measures:

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Ground and surface water pollution	<ul style="list-style-type: none"> • Proper storage, handling and disposal of new and used oil wastes. • Segregate wastewaters containing lubricating oils from other wastewater streams and remove oil. • Separate laboratory wastewater stream from others. • Sampling for quality analysis.
Generation of solid waste	<ul style="list-style-type: none"> • Provision of waste collection bins at the project site. • Re-use of soil, construction debris and other waste where applicable. • Proper containment and disposal of solid waste. • Contracting a licensed waste collection and disposal company. • Creation of awareness on proper solid waste management. • Strict adherence to Waste Management Regulations, 2006.
Air pollution through dust	<ul style="list-style-type: none"> • Continuously Monitor stack air

and gaseous emissions

emissions for PM, using an opacity meter (for an opacity level of less than 10%) or a dust detector.

- Control speed and operation of construction vehicles.
- Regular maintenance of both construction and operational plant and equipment.
- Prohibit idling of vehicles.
- Water should be sprayed during the construction activities.
- Use of low-Sulphur diesel for diesel operated machinery.
- Covering loose materials such as soil piles at the site to prevent dust pollution and spreading by wind.
- Vehicles transporting such materials should also be covered.
- Use of dust masks by construction workers and staff.
- Compliance to Air Quality Regulations, 2014.

Noise and vibration at construction site

- Construction and production activities to be restricted to day time and noise levels contained to acceptable limits.
- Use of ear protection aids by construction workers.
- Sensitize drivers of construction machinery to turn off engine whenever possible.
- Inform residents of anticipated extraordinary noise levels.
- Adherence to Noise and Excessive Vibration Pollution (Control) Regulations, 2009.

Soil erosion and runoff control
