*Impacts*

Biodiversity loss

*Proposed Mitigation Measures*

- Only clear vegetation absolutely necessary for the construction activities.
- Avoid the use of Invasive Alien Species in the landscaping activities.
- Determine Access roads which are to be used by machinery used in the construction and site clearance phase development to avoid the unnecessary trampling of vegetation that will be maintained within the development area.
- Ensure that green belts' which have been proposed for the STW are large as possible as small patches may not be able to support viable populations of some species and these small patches tend to more susceptible to edge effect. It possible position these green belts in

Disturbance of traffic  
flow

adjacent to existing vegetated areas. In addition species richness tends to increase with area, which would be the desired outcome of the incorporation of green belts.

- Provide diversion routes where possible.
- Give a construction itinerary in advance.
- Erect warning signs of ongoing works.
- Expedite construction works so as to reduce the times where roads are blocked.
- Traffic department should approve crossing plan prior to construction, and should approve obstruction times during construction.
- Access of residents should be facilitated by installing appropriate temporary bridges over the pipeline trenches.
- Suitable warning signs should be placed at near locations and should be visible at night.
- A guard should be available 24 hours to help people access across pipeline trenches.
- Alternatives access ways should be communicated to the community.
- Use an integrated wastes management system observing the following hierarchy of options: Reduction at source Recycling Reuse Combustion Land filling.

- Workforce training programs in waste minimization practices.
- Where practical any excess materials will be returned to the supplier.
- Waste oil will be collected for transport and off-site disposal littering, specifically of the natural areas, should be prevented. Adequate containers for litter removal should be supplied on site. These containers should be emptied on a regular basis and the contents removed to an appropriate and licensed waste disposal site.
- The Contractor shall set up a solid waste control and removal system.
- Bins shall be emptied on a daily basis.
- Waste and litter shall be disposed of into scavenger - and weather proof bins. The contractor shall then remove the refuse collected from the working areas, from site at least once a week.
- Adherence to Waste Management Regulations of 2006.
- Drivers should be instructed on the benefits of driving practices that reduce both the risk of accidents and fuel consumption, including measured acceleration and driving within safe speed limits.
- Contractors should consider additional

Soil erosion	<p>ways to reduce potential impacts including implementing a regular vehicle maintenance and repair program.</p> <ul style="list-style-type: none"> <li>Recruit staff from the surrounding communities to decrease the travelling distance thus reducing emissions from vehicular traffic.</li> <li>Ensure that all vehicles involved in the transport of construction material and staff, and machinery involved in the construction is properly maintained and serviced.</li> <li>Machines must not be left idling for unnecessary periods of time; this will save fuel and reduce emissions.</li> <li>Use of dust control methods, such as covers water suppression.</li> <li>Ensure that all trucks carrying aggregate and sand are covered during delivery to the site.</li> <li>Ensure that all material (sand and aggregate) stockpiled on the site to be used in construction activities are regularly sprayed to reduce the effects of wind whipping.</li> <li>Care must be taken in the unloading construction materials (aggregate, sand and cement) to prevent spillage. If a spill occurs, this should be cleaned up as soon as possible.</li> <li>Extra care must be taken to reduce dust in periods when wind speed is greatest and the rainfall amounts are lowest. This will involve extra wetting of the construction area to suppress dust particles.</li> <li>Retain a buffer area of trees and other vegetation generally around the perimeter of the development site which will serve as a natural windbreaks which may reduce the level of dispersion of dust particles generated during this phases of the development.</li> <li>All raw materials must be sourced as close as possible to the construction site thus reducing the emissions from vehicular traffic.</li> <li>All waste must be transported off- site for processing, not burnt or stored for any longer than is absolutely necessary.</li> <li>Adherence to Air Quality Regulations, 2014.</li> <li>Only remove vegetation from areas for the STW/sewers construction.</li> <li>Install appropriate drainage systems to direct water away from slopes.</li> <li>Avoid as far as possible the traversing of bare soil by vehicles to reduce soil compaction.</li> <li>Designate a main access route for heavy machinery.</li> <li>Avoid site preparation in period when wind velocities are highest.</li> <li>Areas storing hazardous substances such as diesel must be properly contained in a bunded area (With capacity to contain 1 ½ times the amount of substances stored. ## THE ENVIRONMENTAL MANAGEMENT AND CO-ORDINATION ACT

(No. 8 of 1999)

### THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

#### ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED QUARRY AND CRUSHER ON PLOT L.R.NO. DAIGA/UMANDE IN LAIKIPIA COUNTY

##### INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Rock Works Energy Limited, is proposing to start a quarrying and put up a crusher at his land blocks whose specifics are organized in blocks whose titles deeds are:

- Daiga/Umande Block 8/309(Gitugi) 1.3155 Ha.
- Daiga/Umande Block8/308(Gitugi) 1.4681 Ha.
- Daiga/Umande Block8/307(Gitugi) 1.1723 Ha.
- Daiga/Umande Block 8/306(Gitugi) 1.0941 Ha.

The project is in Umande area of Laikipia County. It is on a 5.05 Ha. piece of land. Currently the land is bare save for a planned site office block in the area. The neighboring land is mostly under developed with part of it used for small scale farming and grazing. In the wider project neighborhood are the Home Grown Horticultural Farm and Depot and Kongoni Flower farms.

The following are the anticipated impacts and proposed mitigation measures:

##### Impacts

##### Proposed Mitigation Measures

##### Raw materials

- Source building materials from suppliers who use environmentally friendly processes in their operations.
- Ensure that damage or loss of materials at the construction site are kept minimal through proper offloading and storage.
- Use at least 5%-10% recycled, refurbished or salvaged materials to reduce the use of raw materials and divert material from landfills.

##### Vegetation disturbance

- Minimize area of clearance.
- Reintroduce the vegetation that co-exist with the site.

##### Construction waste and other solid generation

- Ensure that construction materials left over at the end of construction will be used in other projects rather than being disposed of.
- Ensure that damaged or wasted construction materials including cabinets, doors, plumbing and lighting fixtures, marbles and glass will be recovered for refurbishing and used in other projects.
- Donate recyclable/reusable or residual materials to local community groups, institutions and individual local
