THE ENVIRONMENTAL MANAGEMENT AND CO-ORDINATION ACT

(No. 8 of 1999)

THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

NOTICE TO THE PUBLIC TO SUBMIT COMMENTS ON AN ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED MINI CEMENT GRINDING PLANT, WITHIN ENGASHURA AREA IN NAKURU COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The Proponent, Karsan Ramji and Sons Limited, is proposing to construct a Mini Cement Grinding Plant, Within Engashura Area in Nakuru County.

The Project involves, two processes involved in cement grinding i.e. the dry process and the wet process. In the case of this proposal, the dry process technology will be used. From storage, the clinker will be transferred by heavy duty wheel loaders into an impact conveyer belt via an intake hopper and dropped into a conveyer belt and transported to its hopper. The hopper will be installed with an overflow-belt to transport excess clinker back to the clinker hall.

The plant seeks to produce ordinary Portland cement (CEM I 42.5N) which is manufactured by intimately inter-grinding 90%wt/total wt clinker, 3.5%wt/total wt pozzolona and 6.5% wt/total wt gypsum.

The following are the anticipated impacts and proposed mitigation measures:

Possible impact	Proposed mitigation measures
Vegetation Clearance	<ul style="list-style-type: none"> Grass and vegetative material resulting from clearance activities should be disposed off through composting and the hardy wood from acacia sold to hotel establishments as wood fuel. Areas of exposed soil should be replanted with grass, as soon as possible, after site preparation and construction to

	<p>help mitigate against flash flooding and soil erosion.</p> <ul style="list-style-type: none"> • Adequate temporary drainage channels should be constructed to help facilitate the outflow of onsite runoff. 		<p>done in conjunction with the Kenya National Highways Authority.</p> <ul style="list-style-type: none"> • Raw materials, such as marl, sand and top soil, should be adequately covered within the trucks (to prevent any escaping into the air or onto the roadway).
Management of changes in drainage	<ul style="list-style-type: none"> • Storm water should be controlled (channeled or put into under-ground pipes), before it enters the site, to ensure that the processing plant is not jeopardized during heavy rains. • An oil-water separator with a sedimentation bay should be incorporated in the pavement of the proposed site (where the drains all congregate). • A detention basin should be incorporated in the design to eliminate the impact of the increased run-off area. 		<ul style="list-style-type: none"> • The transport and movement of equipment (trucks) should be limited to working hours only. • Heavy equipment should be transported during early morning with appropriate pilotage. • The use of flagmen should be employed to regulate trucks entering and exiting the access roads to the highway.
Minimization of noise and vibration	<ul style="list-style-type: none"> • Use equipment indicated, by the various manufacturers/suppliers, as having low noise emissions. • Use equipment that is properly fitted with noise reduction devices (i.e. mufflers, etc). • Restrict the operation and use of noise-generating equipment to regular working hours (daytime only), reducing the potential of creating a noise nuisance during the night. • Supply construction workers operating noisy equipment with appropriate personal noise protection gear (e.g. ear muffs, ear plugs, etc.). 	Management of sewage	<ul style="list-style-type: none"> • The workforce will use existing sanitary facilities available at the quarry site.
Management of air pollution	<ul style="list-style-type: none"> • Particularly in un-grassed, exposed areas the construction site should be dampened prevent a dust nuisance. On hotter days, this frequency should be increased. • Re-vegetation of exposed, cleared, areas to be done as soon as possible to further militate against the effects of dust generation. • Stored construction materials (e.g. top soil, marl), should be covered or wetted (to prevent a dust nuisance). • Construction workers working in dusty areas should be provided and fitted with respirators. 	Management of health and safety risks of workers and visitors	<ul style="list-style-type: none"> • The contractor will provide workers with appropriate Personnel Protective Equipment (PPE) and ensure their use. • Workers to be trained on equipment use. • First aid facilities to be available on site. • The contractor should provide standby vehicle to handle emergencies. • Contractor to comply with the requirements of the Occupational Safety and Health Act (OSHA) by registering the site as a work place. • All visitors to the site to be provided with PPE. • Make prior arrangements with health care facilities to accommodate any eventualities.
		Management of possible fire outbreaks	<ul style="list-style-type: none"> • The best strategy for fire management is to prevent it from occurring in the first place. • Fire extinguishers should be provided and personnel trained on their use. • A fire assembly point should be provided.
		Mitigating Elevated energy demands	<ul style="list-style-type: none"> • The issue with respect to mitigation will be the optimization of the process to ensure efficient use of energy. • Over grinding uses excess energy, so it is important to ensure the maintenance of an optimal particle size distribution (during the production process). Particle size controls the final strength of the cement and so needs careful monitoring at the time of manufacture.
Solid waste generation	<ul style="list-style-type: none"> • Bins should be strategically placed within the campsite and construction site and adequately designed & covered to prevent odour, a dust nuisance and access by vermin. • The bins at both the construction campsite and construction site, should be emptied regularly to prevent overfilling. • Disposal of the contents of the bins should be done at an approved disposal site and by a NEMA licensed waste contractor. • The proponent and the contractor should comply with the requirements of the Waste Management Regulations (Legal Notice No. 61 of 2009) in the collection, conveyance and disposal of wastes from the plant. 	Management of dust generation	<ul style="list-style-type: none"> • Cover trucks during transportation. • Store raw materials in secured areas or sealed silos. • Cover the conveyor belt system. • Install dust collectors at mixing, grinding and bagging unit operations. • Implement an effective housekeeping programme. • Implement monitoring programme by a NEMA designated laboratory.
Management of impacts on traffic flow	<ul style="list-style-type: none"> • Adequate and appropriate road signs should be erected to warn road users of the construction activities. The proponent should provide deceleration and acceleration lanes to and from the project site respectively. This should be 	Management of heat generation	<ul style="list-style-type: none"> • Proper ventilation of the area. • Protection of the worker. • Monitor the time spent by workers in areas with elevated temperatures to ensure that they are not exceeding the prescribed work times based on the clothing being worn and the physical

fitness of the person.

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Thika Way Investments Limited, is proposing a Biogas Power Plant at Chwowe Beach (Lake Victoria), within Kobala in Homa Bay County. The Project involves, the construction of a biogas power plant, consisting of twelve fermenters, feedstock silos, residuals impounding basins, combined heat and power system (CHP combustion engine) Shipping docks for water hyacinth supply, fertilizer processing facilities as well as of a technical equipment building and a main operations building with humanitarian installations and sanitation. The technology used in the design and construction the biogas plant will be based on international standards, which have been customized by various Biogas Plants in the world that are designed by EnviTec Biogas AG. Capacity size of the proposed biogas power plant is 35 MW in total. Due to infrastructural challenges of adequate feedstock supply, project shall be divided into several batches of 8 MW capacity each an one 3 MW batch. The nature of plant operation will apply in the same manner to all facilities installed. The total energy yield to be produced by the 35 MW installed capacity is computed to be 307,000 MWh per year which will be fed into the National grid.

The following are the anticipated impacts and proposed mitigation measures:

<i>Environmental/Social Impact</i>	<i>Mitigation measures</i>

- All buildings, machinery, equipment, structures and partitions that will not be used for other purposes should be removed and reused or rather sold/given to scrap material dealers.

- Where recycling/reuse of the machinery, equipment, structures and other waste materials is not possible the materials should be taken to approve dumpsites by a duly registered waste transporter.

- Vegetation disturbance
land deformation: soil erosion, drainage problems
- Implement an appropriate re-vegetation programme to restore the site to its original status.

- During the re-vegetation period,

appropriate surface water runoff controls will be taken to prevent surface erosion.
