The project anticipates the following impacts and mitigation measures:-

Possible Impacts

Mitigation Measures

Protection of the stream canal

- CCN and Nairobi Water and Sewerage company should ensure all sewer waste in the slums is connected to the improved sewer system
- Ensure all the recharge areas on the lower part of the plot are not blocked
- The proper anti-pollution measures must be put in place

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED SEWER LINE DIVERSION OF THE EPZA SEWER LINE LOCATED BETWEEN PLOT NUMBERS: LR. 337/976, LR.337/1074 AND LR 337/2719 IN ATHI RIVER

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of Environmental (Impact Assessment and Audit) Regulations, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the implementation of the Proposed Sewer Line Diversion of the Epza Sewer Line.

The proponent intends to create a sewage diversion of around 110 meters for its factory expansion project on No. LR. 337/2719. The diversion is to provide space for the factory expansion. The site is located in Athi River in Mavoko Municipality. The site is located between Plot Numbers: 337/976, 337/1074 337/2719.

The project anticipates the following impacts and mitigation measures:

<i>Possible Impacts</i>	<i>Mitigation Measures</i>
Location	<ul style="list-style-type: none"> • Ascertain the location of all the water pipes, electrical installation and other possible interferences within the area of sewer construction. • Elevations should be taken at intervals in case of change of gradient. • Bench marks should be placed at convenient intervals for use during construction.

<i>Possible Impacts</i>	<i>Mitigation Measures</i>
-------------------------	----------------------------

Trenching	<ul style="list-style-type: none"> A specially equipped tractor will be required for this section and properly trained staff by the contractor
Foundations	<ul style="list-style-type: none"> A suitable bedding for the sewer concrete pipes will be required and they should maintain the necessary grade. Acceptable grading as per the consultants expert should be provided If rock is present it should be removed to a depth of 4 to 6 inches below the bottom of the pipes' placement. if the soil is soft it will have to be stabilized with a packed layer of gravel or broken rock
Removing Water	<ul style="list-style-type: none"> Frequently the trench will collect water especially because we are in the rainy season The sewer will have to be layed from the lowest part of the line to permit the water to flow away from the completed sections centrifugal pumps will be required to be used for dewatering the trench. For muddy material a diaphragm pump will be required. For wet sections well points will be used or a drain with open joints and bedded with gravel built underneath the sewer to remove the water.
Placing the concrete pipes	<ul style="list-style-type: none"> The concrete pipes will have to be placed in their exact positions, the elevation of the pipes will be checked and if correct a joint will be made. Where an immediate connection is not made, a vitrified – clay will have to be connected to the branch bell to prevent entrance of dirt or ground water.
Provision for Factory Connections	<ul style="list-style-type: none"> Branches or slants, for factory connections must be installed at the proper locations and with the stubs pointing to the correct side of the location. The position decided on, may be marked by a stake just in advance of concrete pipe laying.
Backfilling	<ul style="list-style-type: none"> Because of the current construction activities in the area, the need for a firm backfill will be required because of the traffic issue Compaction will be required during backfill with sand or gravel backfill.
Inspection	<ul style="list-style-type: none"> Careful, skilled and continuous inspection of every phase of sewer construction will be required Inspection will include examining each section of the concrete pipe to make sure that it is unbroken and usable, checking the position of the pipes in the trench for line and grade, watching the forming of the joints, requiring proper bedding and backfill placement, determine the need for trench drainage to ensure that good work can be done, grade boards and gradient lines should be checked frequently for accuracy.
Measuring Infiltration	<ul style="list-style-type: none"> As soon as each section is completed, tests should be conducted to determine the level of infiltration or leakage into the sewer. An exfiltration test will be required.
Record Keeping	<ul style="list-style-type: none"> Because sewers are buried after construction careful records will be required during construction. The records should show the location and size and the starting and ending points.

The full report of the proposed project is available for inspection during working hours at:

(e) The Director-General, National Environment Management Authority, Popo Road, off Mombasa Road, P.O. Box 67839–00200, Nairobi.

Vegetation loss and Soil erosion	<ul style="list-style-type: none"> • PRANAAV will undertake <i>Alovera</i> and adaptive grass planting as the construction progresses to avoid the soil being washed or carried by wind. • Places of least vegetation cover will be identified for the campsite and only construction points will be completely cleared to ensure minimum vegetative disturbance. • Proper roof catchments and gutters will be put in place to control the possible increased runoff. • Temporary storage tanks will be supplied to trap this water for irrigating planted vegetation.
Ponding Risk from construction	<ul style="list-style-type: none"> • The Proponent will do landscaping, and fill the depressions including borrow pits and disused quarries. • Pumping of water into suitably designed drainage outlets into the seasonal stream will be ensured. • The quality of the discharged water will be monitored in keeping with the Legal Notice 120, of 2006.
Air pollution from Dust and Engine exhaust gases	<ul style="list-style-type: none"> • Prompt compaction of loose soils and aggressive grass replanting will be implemented. • The distance to the nearest population concentration is about 1.5km. the impact of the dust on the surrounding people is therefore unlikely.
Possible Impacts	Mitigation Measures
	<ul style="list-style-type: none"> • Water will be sprinkled on to the disturbed

	off-pit soil to reduce flying dust.
Obstruction by disposed Excavated Soil	<ul style="list-style-type: none"> Dust screens will be erected to contain flying dust and employees/ construction workers will be provided with personal protective equipment (PPE), to reduce possible dust and noxious gas inhalation. Public movement through this mining spots will generally be restricted. Emergency responses which might be hindered by the obstruction will be provided for by clear operating procedures. Most of the excavated materials will be used for fill-ups and some will be applied in landscaping.
Waste into the Environment	<ul style="list-style-type: none"> The staff will not be residing on site but appropriate sized potable septic tanks will be availed to staff during their working hours and to keep with the movement of operations. Quality standards will be adhered to through initial testing and periodic monitoring in line with the requirements of NEMA contained in the Legal Notice 120, of 2006. Appropriate soakpits system will be constructed. The proponent will ensure that it enlists a licensed private company specialized in the handling oil and solid waste wherever necessary. Biodegradable kitchen waste will be composted on site for tree planting manure. A Good Housekeeping as part of the company policy will be implemented at the facility.
Surface and Ground Water Contamination	<ul style="list-style-type: none"> The mining operations may stop temporarily during the very wet season when working the mines becomes difficult and dangerous. The project will have an adequate drainage, on site containment to minimise uncontrolled storm water. Well documented procedures for maintenance of the drainage system will be implemented and staff will be trained accordingly. Oil waste will never be allowed into the environment; proper containment and accidental spill absorption regime will be implemented at all time. Vegetative pollutant traps and continual monitoring of the waters on site and surrounding areas will form part of the pollution control efforts by the company.
Noise pollution and Vibrations nuisance	<ul style="list-style-type: none"> The contractor will ensure that the operations of most of the machinery such as excavator, loader shovel and graders are concentrated within 100m-radius and that all workers are provided with and using PPE such as earmuffs. Vibrations and noise surveillance instruments will be availed periodically to check on any excesses.
Health deterioration of facility workers	<ul style="list-style-type: none"> Dust containment and suction systems will be installed.
Possible Impacts	Mitigation Measures

- Use of PPEs will be strictly enforced.
- Welders will be provided with respirators, eye protections and dust coats to minimize inhalations.
- Regular medical checks will be done and records maintained of the employees.
- Staff working at the site on permanent basis will have medical cover.
- Sanitation related education and practice will form part of the facility's regular routine, to avoid incidences of infections such as cholera, bilharzias and malaria. Swapping of work stations for staff will reduce level exposure.
