THE WEIGHT AND MEASURES ORDINANCE
(Cap. 513)

APPROVAL OF MEASURING INSTRUMENT PRESENTING NOVEL FEATURES

IN EXERCISE of the powers conferred by rule 20 of the Weights and Measures Rules, 1952, the Superintendent of Weights and Measures hereby approves for trade use a pattern of measuring instrument of the following description:—

The measuring instrument is a hand-operated pump for hydrocarbon products of low viscosity known as the SATAM PH 31, capable of discharging quantities of one pint and half pint. The body of the instrument consists of a glass measuring chamber in which moves a piston operated manually by a handle through a rack and pinion. Valves in the piston and metal part of the body ensure that the glass cylinder is full at all times. The piston causes product to discharge through a tap preceded by an optic. An extension of the rack operates a pointer moving over a dial through a connecting strip, and the tip of the rack containing adjustable stops determines the limit of travel of the rack and hence the quantity delivered. Two adjustable stops are provided which can be selected by a control on the dial housing. A totalizer is provided which counts the number of pints delivered, and this is driven from the operating handle shaft.

The dial face bears the legend "The pointer must start from zero and the sight glass and container must be full before and after delivery".

Sealing

A wire passing through two of the nuts clamping together the top and bottom of the measuring chamber.

A wire passing through two of the screws fastening the dial housing.

Detailed drawings and photograph of the measuring instrument may be inspection upon application to the Superintendent of Weights and Measures at the headquarters of the Weights and Measures Department in Campos Ribeiro Avenue, Nairobi, or at any Weights and Measures Office in Kenya, during office hours.

Dated this 8th day of October, 1963.

J. BRYANT,
Superintendent of Weights and Measures.
