THE ENVIRONMENTAL MANAGEMENT AND
CO-ORDINATION ACT
(No. 8 of 1999)THE NATIONAL ENVIRONMENT MANAGEMENT
AUTHORITYENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT
FOR THE PROPOSED GARISSA-ISIOLO ROAD IN GARISSA
AND ISILOO COUNTIES

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has

received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Kenya National Highway Authority, is proposing to construct Garissa-Isiolo Road in Garissa and Isiolo counties. The project road is approximately 305km long and forms part of the 1250km road of the LAPSSET corridor. It starts near Garissa at the A3/C81 junction and continues along C81 before branching off in the direction of existing D568 road through the trading centre at Kulamawe before terminating at Isiolo (B9/A2 Junction). The terrain in this segment is generally flat as it avoids the Nyambene Hills which lie to the east of Isiolo. The project road can be divided into two sections: Garissa-Kulamawe- 238km; and Kulamawe-Isiolo, 67km.

The following are the anticipated impacts and proposed mitigation measures:

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Vegetation cover	<ul style="list-style-type: none"> The clearance of the site for construction purposes shall be kept to a minimum. The use of existing un-vegetated or disturbed areas for the Contractor's Camp, stockpiling of materials etc. shall be encouraged. Areas to be cleared, especially borrow pits, RoW and Camp sites must be cleared in such a way that damage to adjacent areas is prevented. Although all vegetation encroaching into the road reserve must be cleared to give room for visibility, this should be restricted to the RoW. Trees should be trimmed rather than removed wherever possible. To plant indigenous and native trees along the project road in all the above mentioned sites. The use of fuel wood by construction workers should be discouraged, workers to be encouraged to use clean energy sources. Ensure suppliers are legally compliant and environmentally sensitive.
Hazardous substances and other liquid pollutants	<ul style="list-style-type: none"> Hazardous materials shall be stored above flood level and at least 20metres from any watercourse. Areas for the storage of fuel and other flammable materials shall comply with standard fire safety regulations. Chemicals and fuel shall be stored in storage tanks within a secure compound. All chemicals and fuels shall be stored in accordance with their MSDS. Storage areas or secondary containment shall be constructed of waterproof reinforced concrete or approved equivalent, which is not adversely affected by contact with chemicals captured within them. The minimum volume for secondary containment shall be 110% of the capacity of the largest tank system, plus 10% of the total capacity of all other separate tanks and containers within the bund wall with closed valves for controlled draining during rains. Pipe-work carrying product from the tank to facilities outside the containment shall be provided with secondary containment. Tank equipment such as dispensing hoses, valves, meters, pumps, and

<p>Solid waste</p> <ul style="list-style-type: none"> • gauges shall be located within the containment or provided with own containment. • Fence of the tank compound with locks or other adequate security controls at the site. • Locks on unattended dispensing hoses. • Appropriate training for the handling and use of fuels and hazardous material must be provided to the Contractor agents handling these products. This includes providing spill response and contingency plans. • Extreme care should be taken when transferring chemicals and fuels from storage vessels to equipment and machinery on an impervious sealed area which is kerbed and graded to prevent run-off. Chemical and fuel transfer areas shall drain away from the perimeter band to a containment pit. The design shall provide for the safe and efficient movement of vehicles. • All chemicals stored within the banded areas shall be clearly labeled detailing the nature and quantity of chemicals within individual containers. • Any chemical or fuel spills shall be cleaned up immediately. The spilt liquid and clean-up material shall be removed, treated and transported to an appropriate site licensed for its disposal. • Adherence to Waste Management Regulations of 2006. • The contractor shall develop a waste management plan. • Stockpiling spoil soils for rehabilitation and landscaping purposes. • Using waste minimization techniques such as buying in bulk. • Allocating responsibilities for waste management and identifying all sources of wastes, and ensuring wastes are handled by personnel licensed to do so. • Making available suitable facilities for the collection, segregation and safe disposal of the wastes. • Creating waste collection areas with clearly marked facilities such as colour coded bins and providing equipment for handling the wastes. The bins should be coded for plastics, rubber, organics, glass, timber, metals etc.. • Ensuring all wastes are dumped in their designated areas and through legally acceptable methods and that the bins are regularly cleaned and disinfected. • Assessing and creating opportunities for Regulation, Reducing, Reusing, Recycling, Recovering, Rethinking and Renovation. • Creating adequate facilities for the storage of construction materials and chemicals and controlling access to these facilities. • Ensuring bins are protected from rain and animals. • Contractor will make provisions for responsible management of any hazardous waste generated within the 	<p>Liquid wastes</p> <ul style="list-style-type: none"> • project area, and should be more than 100 metres from watercourses. • The final disposal of the site waste shall be done by approved waste disposal agents. • Adherence to Waste Management Regulations of 2006. • Potential pollutants of any kind and in any form shall be kept, stored and used in such a manner that will prevent escape into the water table system thereby endangering it. • Wash areas shall be placed and constructed in such a manner as to ensure that the surrounding areas (including groundwater) are not polluted. • Waste water from the vehicle and equipment service area/ yard should be channeled through a functional grease/oil trap before it is directed to the main waste water handling facility. • The Contractor shall notify the RE of any pollution incidents on site. 	<p>Asphalt, bitumen and paving</p> <ul style="list-style-type: none"> • The plant should be situated on flat ground. • Topsoil shall be removed prior to site establishment and stockpiled for later rehabilitation of the site. • Bitumen drums / products shall be stored in an area approved by the RE. Construction works should be undertaken preferably during business hours Adherence to Air Quality Regulations, 2014. To keep noise level within acceptable limits, construction activities shall where possible be confined to normal working hours. Although few schools, health facilities and places of worship are found on the sections of corridor going through Garissa, Meru and Isiolo, residents will be timely notified by the Contractor before construction is due to commence in their vicinity. THE ENVIRONMENTAL MANAGEMENT AND CO-ORDINATION ACT

(No. 8 of 1999)

THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED CONSTRUCTION OF LAKE VICTORIA RING ROADS TRANSVERSING THROUGH BUSIA, MIGORI, HOMABAY, SIAYA AND KISUMU COUNTIES

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Kenya National Highway Authority, is proposing to construct Lake Victoria Ring Roads; the project road is approximately 450 km long. It is situated in the Lake Region of Kenya, and crosses the five following counties: Busia, Siaya, Kisumu, Homa Bay and Migori. It starts at the junction with B1 Road in Bumala Town, and runs along the Lake shore southwards, up to Muhuru Bay, near the Kenya -Tanzania Border

The following are the anticipated impacts and proposed mitigation measures:

*Impacts**Proposed Mitigation Measures*

Fish resources

- The contractor should cease bridge construction activities between the months of April and May which coincide with the rainy season and fish breeding season.
- The contractor should report any incidences of accidental fuel or oil spills on the river bed immediately they occur.
- Prior to returning flows to the river channel the contractor should replace and restore the river bottom with suitable rock material.
- Dredging should be done after the current causeway shall have been removed to minimize the effects of sedimentation.
- Best management practices should be enforced to avoid accidental spill of bitumen, concrete leachate and sediments and spill of petrochemicals through proper storage, use and clean-up of construction related materials.
- Workers should be prohibited from fishing in Lake Kanyaboli.

Avifauna

- Keep site clearance to the project footprint and avoid or minimize clearance beyond the project corridor.
- Time spent around the sensitive bird areas should be minimized by adequately planning for the works and avoiding equipment idling time.
- Heavy works within Yala swamp should cease between April to June as this period coincides with the breeding and nesting seasons of most birds.

Wetlands

- The contractor shall ensure that the disturbed wetland areas are rehabilitated properly after completion of works.
- Wetland disturbance during construction should be reduced by keeping vehicles on established access roads and by minimizing foot traffic by workers in undisturbed areas.
- The contractor shall develop sub-plans for construction wetlands.

- Construction works involving heavy equipment and machinery should be scheduled during the dry season to minimize soil compaction.

- Construction debris and bitumen should be properly handled to avoid contamination of the wetlands.

- In case of spillages a reporting mechanism should be adhered to as specified in section 8.5.3.

- Avoid equipment entry into wetlands and where equipment entry into wetlands is unavoidable; minimize the area disturbed as well as the number of repeated passes over the same trail.

- The contractor shall ensure that the construction workers do not fish or harvest reeds from the wetlands.

- The contractor shall ensure that no material is stored within the wetlands.

- Practice sound road engineering by maintaining good drainage and natural water flows. However, the drainage ditches should only be constructed where necessary.

- To minimize potential soil erosion the contractor should consider planting appropriate grass on back slope, side slope and other sites prone to erosion.

- Develop an erosion control and revegetation plan that stipulates measures to minimize soil loss and reduce sedimentation to protect water quality especially for sections that will interact with water resources.

- Design runoff control features especially on the roadside drainages channels to minimize soil erosion.

- Limit cleared areas to project footprint to avoid unnecessary exposure of soil to agents of erosion.

- Line side-drains with concrete or by stone pitching in erosion prone soils to avoid gully formation.

- In the event that the direct impacts on wetlands vegetation associated with clearing for roadworks cannot be avoided, the contractor should establish measures to minimize impacts and restrict his working space only to the extent required for the road works.

- To the extent practicable the contractor should rehabilitate the disturbed sections of the wetland by ensuring that the vegetation community is restored to a close approximation of the original natural condition that existed prior to disturbance.

- Environmental rules for contractors, including transparent penalties for noncompliance, need to be incorporated in bidding documents and contracts.

- The contractor to aim at minimizing roadside habitat loss and also to stage works so that vegetation clearance only coincides with those sections that are under active construction.

- Uncontrolled water discharges should not be allowed to be channeled into water sources.

- Camp sites, waste disposal and soil dumping areas should be located at least

Soil pollution

Vegetation

Water resources

	<ul style="list-style-type: none"> 20 m from the highest water level of any surface water body. Grey water should be channeled to a soak pit to prevent mixing with run off that would eventually find their way to nearby water sources. All stockpiles should be covered especially during the rainy season. Upon completion of bridge construction the contractor shall ensure that all cofferdams and settling ponds are disassembled and any residual or waste concrete removed. The work site should also be cleaned. The contractor should ensure that concrete wing walls, gabions, riprap or other suitable controls are established at or near bridge structures. Water permits for the abstraction of water shall be obtained from WARMA to ensure that existing water rights and uses will not be affected by the road project for its diverse water needs. Consultations with the Water Resource Users Association (WRUAs) should be done prior to abstraction to gain their support. 	
Solid waste	<ul style="list-style-type: none"> The contractor shall develop a comprehensive waste management plan. Properly labelled and strategically placed waste disposal containers shall be provided at all the places of work. Construction workers shall be sensitized on the need for proper waste disposal. No burying or dumping of any waste materials, vegetation, litter or refuse shall be permitted. Provision for responsible management of any hazardous waste generated during the construction works shall be done. Where feasible construction materials shall be recycled especially containers and cartons. Involve the local residents on the removal and disposal of the spoil and solid wastes to approved dumping areas. For the spoil generated, disposal shall be done on pre-identified sites more than 20 meters from watercourses and in a position that will facilitate the prevention of storm-water runoff from the site from entering any watercourse. 	
Liquid waste and effluent	<ul style="list-style-type: none"> No grey water runoff or uncontrolled discharges from the site/working areas (including wash down areas) to adjacent watercourses and/or water bodies shall be permitted. Water containing such pollutants as cements, concrete, lime, chemicals and fuels shall be discharged into a conservancy tank for removal from site. The Contractor shall also prevent runoff loaded with sediment and other suspended materials from the site/working areas from discharging to adjacent watercourses and/or water bodies. Potential pollutants of any kind and in any form shall be kept, stored and used in such a manner that any escape can be contained and the water table not endangered; 	
	<p>Noise and vibration</p> <ul style="list-style-type: none"> Wash areas shall be placed and constructed in such a manner so as to ensure that the surrounding areas (including groundwater) are not polluted. The Contractor shall notify the RE of any pollution incidents on site. Exploit quarries that are located in isolated areas away from settlements or human made structures. Employ careful blasting methods and warn nearest residents of your intention to blast one week to scheduled blasting. Follow National Guidelines on use of explosives. Carefully select batching plant locations that are at least 200m away from any sensitive institutions or settlements. Hoard the batching plant area with at least 5 m tall buffer barrier that will limit noise transmission from the site. Restrict working hours to daytime when ambient noise levels are generally high and avoiding work at night. Inform potentially affected people or institutions located within 200 m of a potentially noisy activity at least one week in advance - of the intention to undertake noisy operations and advice on the timing. Information should also advise the potentially affected people of actions they are required to take to avoid or minimize noise or vibration impacts on themselves. 	
	<p>Air quality</p> <ul style="list-style-type: none"> Restrict excavations to the project footprint to minimize surfaces exposed to wind erosion. Manage stockpiles by covering those that are not of immediate use. Carefully control works close to the listed sensitive receptors such that minimal dust is generated and whenever earthworks are being undertaken, then dust suppression should be implemented continuously. Ensure contractor's staff working at high dust generating sites are provided with appropriate PPEs to include dust masks and / or suitable aspirators. The contractor should inform the management of sensitive institutions on the days that excess dust is likely to be generated so they can be prepared. The same applies to works along urban centers. 	
	<p>Public health and HIV/AIDS</p> <ul style="list-style-type: none"> Initiate an awareness creation, prevention and training programme on HIV/AIDS upon commencement of works. Establish wellness centers including VCT and ARV centers at strategic location of the project corridor. Incorporate HIV/AIDS control program as part of the construction deliverables.
