## DEPARTMENT OF AGRICULTURE

## LOCUST REPORT 29TH DECEMBER, 1932

*Uganda Buganda* — Fewer flying swarms have been observed and very few further layings are recorded. Hatchings continue, the hoppers are being killed by beating.

*Eastern Province* — A few flying swarms, new egg areas and hopper bands are recorded from Teso.

*Northern Province* — Flying swarms are recorded in reduced numbers, and additional layings have been correspondingly small. Some further hatchings have occurred. The hopper bands in the inhabited areas are being destroyed. In the extensive uninhabited areas of Gulu the hoppers will shortly reach the winged stage.

*Western Province* — Numerous new hopper bands are recorded from Ankole.

## KENYA

No change in the general situation has been reported during the past fortnight. Flying swarms have been present in all Kavirondo districts.

Kisumu, Londiani, Nandi, Elgeyo, Ruiru, Baragoi, Nakuru, Naivasha and Machakos. Although a few large swarms have been observed, the numbers of locusts have diminished in most cases.

Some further living has taken place in North Kavirondo and small numbers of hoppers have hatched there, also in the Kaima Koiva area. So far as is known at present, no hatching on a large scale has occurred in the Colony.

The District Commissioner Rumuruti, reports his district almost free of flying swarms, and that the locust position is giving less cause for anxiety than for some months past.

It would appear that no breeding on a large scale is now likely to take place in the Colony during the present season, and that unless swarms again enter Kenya from elsewhere any infestation during 1933 may be on a small scale in comparison with the past two years.
